**Development Goals** 

Appendix D: Green Bond Verification Report

# Introduction

The San Francisco Public Utilities Commission (SFPUC) is a department of the City and County of San Francisco. Since the release of its first Climate Action Plan in 2004, San Francisco has been leading the way on local climate action, environmental justice, and developing and implementing innovative programs and outreach campaigns to engage with all San Franciscans.

These plans impact all San Francisco departments, including the SFPUC, and influence operating and capital investment activities. The SFPUC operates within the City of San Francisco as well as the State of California and is governed by State and local laws and regulations, as well as policies and programs within the SFPUC, created to achieve additional climate and social inclusion goals.

The SFPUC views green bonds as an important tool to help meet these goals and finance low-carbon, climate-resilient infrastructure. Since issuing its first green bond in 2015, the SFPUC has sold more than \$3 billion in certified green bonds across its three enterprise utilities: Water, Wastewater, and Power. Impacts from the bonds to date include increased water storage, upgrades to renewable energy generation facilities and the use of green infrastructure to divert stormwater from treatment plants.

In addition to providing project impact information, this report seeks to highlight associated cobenefits as well as describe the context in which climate and social inclusion informs the SFPUC's capital planning decisions. This report reflects activities through June 30, 2021.

# **Wastewater Enterprise Green Bond Impact Report**

Wastewater Enterprise green bonds issued to date have been used to fund the Sewer System Improvement Program (SSIP). The SFPUC has embarked on a comprehensive SSIP to be implemented as part of the Wastewater Enterprises rolling 10-year capital improvement plan. The SSIP is a citywide investment to upgrade the SFPUC's aging infrastructure to ensure a reliable, sustainable and seismically safe sewer system. The SSIP is a series of major capital improvement projects that are necessary to bring San Francisco's wastewater and stormwater system into a state of good repair, and to meet the Commission-endorsed goals and levels of service, which include the following:

- Provide a compliant, reliable, resilient and flexible system responsive to catastrophic events;
- Integrate grey and green infrastructure to manage stormwater and minimize flooding;
- Provide benefits to impacted communities;
- Modify the system to adapt to climate change;
- · Achieve economic and environmental sustainability; and
- Maintain ratepayer affordability.

### Program Scope

The SSIP is broken into three major subprograms: Treatment Plants, Collection System, and Land Reuse. Projects are continuously prioritized and advanced into to the program based on criticality of need and risk. The SSIP project development will also consider environmental benefits, sustainability, and community benefits in addressing the long-term wastewater needs. These projects include but are not limited to:

### Wastewater Treatment Projects

- Replacing existing, aged, and failing solids handling facilities with new state-of-the art Biosolids Digester Facilities
- Improving the level of screening and grit removal in existing facilities
- Replacing the antiquated oxygen generation plants
- Condition assessment and rehabilitation of building structures
- Replacing mechanical and electrical equipment
- Seismic retrofitting

### Sewer Collection System Improvement Projects

- Enhancing conveyance in the Channel and Islais Creek watershed to provide reliability and redundancy, and increase capacity to manage storm events
- Rehabilitating and replacing interceptors, tunnels, pump stations, force mains and Transport/Storage (T/S) boxes
- Rehabilitating Combined Sewer Discharge (CSD) structures and preventing backflow of bay water through CSDs due to sea level rise

### Stormwater Management/Flood Control Improvement Projects

- Green infrastructure (bioretention planters for stormwater runoff, permeable paving)
- Flood resilience (analysis of flooding risks, stormwater detention and conveyance concepts, food barriers)
- Hydraulic and drainage sewer improvements in food prone neighborhoods
- Advanced rainfall and operational decision systems (automated real time forecasts with increased accuracy)

## **Green Bond Spending Details**

The proceeds from the green bond issuance are separately tracked and allocated to designated eligible projects. Spending by bond and eligible project is detailed below.

The proceeds have been allocated to finance or refinance projects within the SSIP and Sustainalytics determined that all SSIP projects are eligible to be financed with green bonds.

### **Green Bond Proceeds**

# Wastewater Series 2016 A As of June 30, 2021

Project	Estimated Use	Prior Years Spending	FY 20-21 Spending	Remaining

# Case Study: Environmental Justice Analysis for Bayview-Hunters Point

This first-of-its-kind Environmental Justice Report is a groundbreaking example of a public utility living up to its commitments to equity while evaluating the impacts of a major public works project – the Biosolids Digester Facilities Project. It integrates census, public health, education, air and water quality, traffic and transportation, housing, and economic and workforce data to provide a snapshot of San Francisco's Bayview-Hunters Point neighborhood's burdens and opportunities, and comprehensively analyzes how the subject project could exacerbate or improve conditions in this overburdened and underserved area. This neighborhood is home to a historically large African-American population and is situated near a former Naval Shipyard and other industrial uses. ESA helped SFPUC prepare the report, which begins with an inventory of existing disproportionate environmental and health burdens, lack of services and amenities, and other indicators—over 60 in all, based on input from several of SFPUC's advisory committees. The report next evaluates the project's potential effects, comparing its impacts to known EJ burdens. That analysis resulted in SFPUC's voluntary adoption of recommendations, such as expanded air quality monitoring and offsets, tree planting, bike and pedestrian improvements, and electric vehicle charging stations

# Appendix A: State, City and SFPUC Legal, Regulatory, Policies and Programs

### State of California

The State of California has enacted legislation, regulations and executive orders that put the State on course to achieve significant greenhouse gas reductions while also addressing the impacts of climate change. The <u>California Climate Policy Dashboard is</u> a project from the Center for Law, Energy & the Environment at the University of California at Berkeley. It seeks to provide a concise, easy-to-use overview of some of the major California climate laws and programs and introduce readers to some of the state regulators responsible for implementing them. Described below are selected policies and programs related to the SFPUC's capital planning:

- Assembly Bill 32 (Nunez, 2006) and Senate Bill 32 (Pavley, 2016)
  - Landmark legislation requiring California to reduce its overall greenhouse gas emissions to 1990 levels by 2020 and 40% below 1990 levels by 2030, and appointing the California Air Resources Board to develop policies to achieve this goal.
- Assembly Bill 1482 (Gordon, 2015), Senate Bill 246 (Wiechowski, 2015), Senate Bill 379 (Jackson, 2015), Assembly Bill 2800 (Quirk, 2016), Senate Bill 1035 (Jackson, 2018); Senate Bill 20 (Lara, 2018)
  - State laws calling for preparation of state climate adaptation strategy, establishing the Office of Planning and Research's Integrated Climate Adaptation and Resiliency Program, requiring local governments to include adaptation and resiliency strategies in general plans, requiring state agencies to account for climate change when planning new infrastructure, and establishing a risk transfer/insurance working group.
- Climate Change Scoping Plan
  - California's comprehensive plan outlining the state's approach to achieving its greenhouse gas emission reduction targets, including SB 32's goal of reducing emissions 40% below 1990 levels by 2030

In August of 2018, California State Treasurer John Chiang signed the <u>Green Bond Pledge</u>, making California the first state to pledge to use 'green' financing to combat climate change.

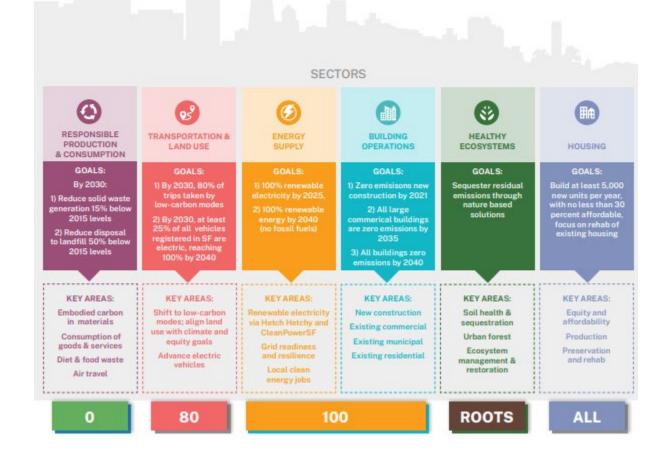

### City and County of San Francisco

San Francisco has long been a leader in the fight against climate change. Between 1990 and 2019, San Francisco's carbon footprint was reduced by 41% while population increased 22% and the GDP increased 199%.

The 2021 San Francisco Climate Action Plan is the result of a multi-year process developed by the San Francisco Department of the Environment with support and collaboration from many individuals and institutions, including the SFPUC. The Plan charts a pathway to achieve net-zero greenhouse gas emissions and works toward addressing racial and social equity, public health, economic recovery, resilience and providing safe and affordable housing to all. The Plan aligns to San Francisco's Climate Action Framework:

# SAN FRANCISCO'S CLIMATE ACTION FRAMEWORK

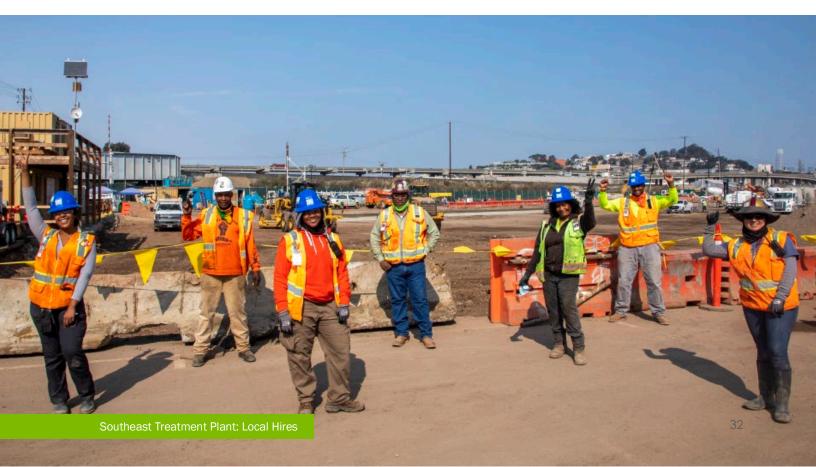

Net-Zero Emissions Citywide By 2040 Racial, Social & Economic Equity

San Francisco's leadership further strengthened the City's commitment to climate action in 2019 when the Board of Supervisors unanimously approved the Climate Emergency Resolution 160-19, aligning San Francisco's climate goals with the Paris Agreement by limiting global warming to 1.5 °C above pre-industrial levels.

In addition to the activities described above, the Mayor and Board of Supervisors have led two initiatives described below that require SFPUC capital planning to include climate and social inclusion:

- <u>Local Hire Ordinance</u> was adopted in December of 2010 by the San Francisco Board of Supervisors. The ordinance
  requires that local residents perform a minimum 30% of trade hours and 50% for apprenticeship hours and is one
  of the strongest pieces of legislation in the country to promote the employment of local residents on locally
  sponsored projects.
- <u>Guidance for Incorporating Sea Level Rise into Capital Planning</u> also now takes place as part of the
  City's Capital Planning Review process. All City projects now undergo a sea- level vulnerability
  assessment and must respond to anticipated consequences through redesign or relocation. SFPUC
  staff actively participated in the Mayor's Sea I evel Rise Coordinating Committee and Working Group
  to develop the Sea Level Rise Guidance. The objective is to work with other City agencies towards a
  more holistic, integrated and coordinated response to climate change.

### San Francisco Public Utilities Commission

#### **Overview**

The SFPUC provides retail drinking water and wastewater services to the City of San Francisco, wholesale water to three Bay Area counties (Alameda, San Mateo and Santa Clara), and green hydroelectric and solar power to municipal departments and retail electric customers. Headquartered in San Francisco, the SFPUC has approximately 2,500 employees working in seven counties and has a combined annual operating and capital budget of over \$2 billion. The SFPUC is comprised of three utility enterprises:

- **The Water Enterprise** serves more than 2.7 million people and is responsible for managing the transmission, treatment, storage and distribution of potable water to the City of San Francisco and 27 water agencies in three Bay Area counties San Mateo, Santa Clara and Alameda.
- The Wastewater Enterprise serves San Francisco residents and operates three
  treatment plants for sewage and stormwater treatment as well as maintains nearly 1,000
  miles of combined sewer and stormwater lines.
- The Power Enterprise provides green hydroelectric power to municipal customers in San Francisco. The Power Enterprise also operates CleanPowerSF, a program that enables the City to purchase cleaner power on behalf of local residents and support local jobs, stable energy prices and clean energy infrastructure.

### Financial Policies

The San Francisco City Charter requires the SFPUC to exercise prudent financial stewardship of SFPUC assets by establishing "rates, fees and charges at levels sufficient to improve or maintain financial condition and bond ratings at or above levels equivalent to highly rated utilities of each enterprise under its jurisdiction, meet requirements and covenants under all bond resolutions and indentures \_, and provide sufficient resources for the continued financial health (including appropriate reserves), operation, maintenance and repair of each enterprise, consistent with good utility practice."

To serve the financial objectives and parameters established by the Commission, the SFPUC has established a <u>10-Year Financial Plan</u> as well as <u>Debt Management Policies and Procedures</u> for debt financings associated with the Water, Wastewater and Power Enterprises. In addition, the SFPUC maintains a <u>Fund Balance Reserve Policy</u>, a <u>Debt Service Coverage Policy</u>, and a <u>Capital Financing Policy</u>. Last, the <u>Debt Policy of The City and County of San Francisco</u>, established by the Controller's Office of Public Finance, summarizes the City's existing debt policies and formally establishes them for all future debt. <sup>3</sup>

### Environmental, Social, and Governance Policies and Programs

With the useful life of capital assets typically extending 30 years or more, climate mitigation and adaptation criteria are included in the SFPUC's capital planning and project selection process. Described below are SFPUC-level policies and programs that contribute to capital planning decisions informed by climate adaptation and/or mitigation and social inclusion.

The activities below have been organized into three categories: environmental, social, and governance (ESG):

<sup>&</sup>lt;sup>3</sup> For information about SFPUC's Investor Relations and Financial Reports, see:https://sfpuc.org/about-us/reports/debt-management-and-disclosure-reports

### **Environmental**

- Community Choice Aggregation: CleanPowerSF is San Francisco's Community Choice Aggregation program. Administered by the SFPUC Power Enterprise, CleanPowerSF is a not-for-profit program launched in 2016 with a mission to provide San Francisco electricity customers with the choice of having their electricity supplied from clean, renewable sources at a competitive price. CleanPowerSF is now serving over 376,000 San Francisco customers with 90% renewable energy. Prior to CleanPowerSF, electricity accounted for 29% of the City's greenhouse gas emissions. Now, that total has dropped to 11%.
- GoSolarSF: GoSolarSF is administered by the SFPUC Power Enterprise and provides incentives to help CleanPowerSF and Hetch Hetchy residential and business electric customers install solar panel systems. Together these systems produce 19.9 megawatts of renewable solar electric power.
- Water Enterprise Stewardship Policy: The purpose of the Water Enterprise Environmental Stewardship Policy is to establish a long-term management policy for natural resources associated with the operation of the water system within the Tuolumne River, Alameda Creek, and Peninsula watersheds.
- <u>Green Infrastructure</u>: Green infrastructure projects divert stormwater from the sewer system while beautifying San Francisco's neighborhoods, providing ecological function and urban habitat, and contributing to bike and pedestrian friendly design. Green infrastructure technologies include rain gardens, permeable pavement, and rainwater harvesting systems. The SFPUC has completed 272 Green Infrastructure projects which diverts 63 million gallons of stormwater from the sewer system annually.
- OneWaterSF: The objective of OneWaterSF is to optimize the use of finite water and energy resources with community and ecosystem needs, creating a more resilient and reliable future for the SPFUC.

### Social

- Community Benefits: The SFPUC's Community Benefits Program focuses on Workforce Development, education, art, environmental Justice/ and use, Neighborhood Partnerships, and Small Business Opportunities. The SFPUC is the first utility in the nation to adopt a Community Benefits Policy.
- Social Impact Partnership Program: The SFPUC is the first public utility in the country to implement a social impact program that advances corporate social responsibility as a part of its competitive bidding process. If awarded a contract, pre-identified "Community Benefit Commitments" become a binding contract term that must be delivered at no cost to the City. To date, these commitments have supported scholarships for college students, mentorship for middle-school students, internships for youth and young adults, child care for working parents, mentorship for small businesses, urban greening and access to healthy food. Since 2011, 74 contracts have included commitments totaling \$34 million in financial, volunteer and in-kind contributions.

### Governance

- SFPUC Commission: The SFPUC Commission consists of five members, nominated by
  the Mayor and approved by the Board of Supervisors. Their responsibility is to provide
  operational oversight in areas such as rates and charges for services, approval of
  contracts and organizational policy. Seat 1 of the commission is reserved for a member
  with experience in environmental justice policy and an understanding of environmental
  justice issues.
- <u>Citizens' Advisory Committee</u>: The Citizens' Advisory Committee (CAC) provides
  recommendations to the General Manager of the SFPUC, the Commission itself and
  the San Francisco Board of Supervisors regarding the agency's long-term strategic,
  financial and capital improvement plans. Comprised of 17 appointees, the CAC includes
  a member appointed by the mayor who represents a regional or statewide environmental
  organization and a member appointed by the President of the Board of Supervisors who
  represents an environmental justice organization.
- 2020 Strategic Plan: In August 2016, the SFPUC Strategic Planning Steering Committee
  identified environmental Stewardship as one of six goals to guide its work through the
  year 2020. Within environmental Stewardship, the 2020 Strategic Plan specifies the
  goal to sustainably manage the resources entrusted to its care to ensure environmental
  and community health. This includes the following objectives:
  - o Sustainably manage natural resources and physical systems to protect impacted people, water, land, and ecosystems.
  - o Develop, coordinate, and communicate a comprehensive and consistent approach to mitigate and adapt to climate change.
  - o Be resource efficient in all business operations.
  - o Investigate the feasibility of implementing an environmental management system.

### **United Nations Sustainable Development Goals**

With increased interest in the United Nations Sustainable Development Goals (SDGs) among investors and other stakeholders, impacts from SFPUC projects financed by Green Bonds are also aligned with several (SDGs). To determine project impact, the SFPUC relied on the International Capital Market Association (ICMA) "Green, Social and Sustainability Bonds: A High-Level Mapping to the Sustainable Development Goals" (June 2020).

# **Appendix B: SFPUC Green Bonds Program**

Since 2015, the SFPUC has issued more than \$2.1 billion in green bonds to finance Water, Wastewater, and Power capital projects that advance climate change mitigation or adaptation, making the SFPUC one of the largest municipal issuers of green bonds in the United States. In 2017, the SFPUC was recognized by the Climate Bonds Initiative at its annual conference for being the first issuer worldwide to sell bonds under its water criteria. In 2018, the SFPUC became among the first signatories of the Green Bond Pledge. In 2019, the combined green bond programs of the City of San Francisco and the SFPUC were recognized as a global leader in the C40 report <a href="Cities100">Cities100</a>. Finally, the SFPUC was awarded the 2021 US Municipal Green Bond of the Year by Environmental Finance.

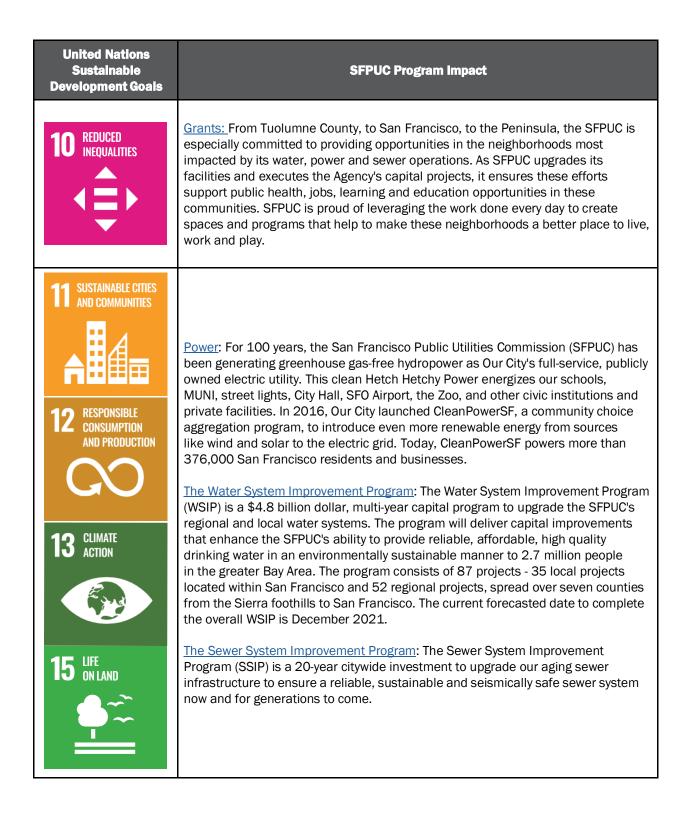

The SFPUC adheres to the International Capital Market Association's Green Bond Principles four core components:

- <u>Use of Proceeds</u>: The SFPUC issues Green Bonds to finance projects with clear environmental benefits. Project categories include sustainable water and wastewater management, climate change adaptation and renewable energy.
- Process for Project Evaluation and Selection: San Francisco's numerous policies and programs described herein ensure sustainable capital planning and project selection. Further, the SFPUC engages third-party verifiers to validate selected projects meet the required criteria. As part of the certification process, the SFPUC retained Sustainalytics to provide third-party verification that the bonds are aligned with the Climate Bonds Initiative.
- <u>Management of Proceeds</u>: The SFPUC records Green Bond proceeds in separate capital project funds available only to eligible projects. Non-eligible projects cannot access proceeds generated from green bonds.
- Reporting: The SFPUC publishes annually a project spending and management of
  proceeds report for each green bond issued throughout project construction. Beginning
  with the FY 2018-19 reports, in addition to project spending, the reports will also include
  project impacts as well as additional information in connection with the climate and
  sustainability activities of the SFPUC.

### **Appendix C: SFPUC Climate and Social Inclusion Impacts Aligned** to the United Nations Sustainable Development Goals (UN SDGs)

United Nations Sustainable Development Goals	SFPUC Program Impact
4 QUALITY EDUCATION	Education: The SFPUC is committed to preparing the next generation of environmental stewards and continuing to engage with existing generations to prevent pollution and sustain our natural resources. The SFPUC believes that everyone has a role to play in maintaining the environment and is proud to empower its service area communities with the resources needed to do it.
5 GENDER EQUALITY	Small Business Opportunities: The SFPUC is dedicated to increasing women in the construction trades. The SFPUC partners with the National Association of Women in Construction and the Women's Business National Council to host the Annual Women in Construction Exposition. The SFPUC is also proud to be a member of the Tuolumne Community Collaborative, group of more than 25 entities including education institutions, local contractors, professional services frms, and government agencies that support a pipeline of local workers in the construction industry. The Collaborative features a Pre-Apprenticeship Construction Training Program, and it recently celebrated an inaugural all-female class. Through the program, participants study construction industry best practices, experience hands-on training, learn construction safety, and receive project-specific worker certifications.
6 CLEAN WATER AND SANITATION  14 LIFE BELOW WATER  SECOND	The Water System Improvement Program: The Water System Improvement Program (WSIP) is a \$4.8 billion dollar, multi-year capital program to upgrade the SFPUC's regional and local water systems. The program will deliver capital improvements that enhance the SFPUC's ability to provide reliable, affordable, high quality drinking water in an environmentally sustainable manner to 2.7 million people in the greater Bay Area. The program consists of 87 projects - 35 local projects located within San Francisco and 52 regional projects, spread over seven counties from the Sierra foothills to San Francisco. The current forecasted date to complete the overall WSIP is December 2021.  The Sewer System Improvement Program: The Sewer System Improvement Program (SSIP) is a 20-year citywide investment to upgrade our aging sewer infrastructure to ensure a reliable, sustainable and seismically safe sewer system now and for generations to come.
7 AFFORDABLE AND CLEAN ENERGY	Power: For 100 years, the San Francisco Public Utilities Commission (SFPUC) has been generating greenhouse gas-free hydropower as Our City's full-service, publicly owned electric utility. This clean Hetch Hetchy Power energizes our schools, MUNI, street lights, City Hall, SFO Airport, the Zoo, and other civic institutions and private facilities. In 2016, Our City launched CleanPowerSF, a community choice aggregation program, to introduce even more renewable energy from sources like wind and solar to the electric grid. Today, CleanPowerSF powers more than 376,000 San Francisco residents and businesses.

United Nations Sustainable Development Goals	SFPUC Program Impact
8 DECENT WORK AND ECONOMIC GROWTH	Workforce Development: As one of the City's largest employers, the SFPUC is fostering a skilled and diverse local workforce that manages water, power and sewer operations and is connected to the communities we all call home. SFPUC's workforce development programs connect local youth and adults with learning, apprenticeship, job training, employment, and business opportunities. These programs support a strong, inclusive, local economy and a skilled, diverse, local workforce for today and tomorrow.  Social Impact Partnership Program: The SFPUC views its capital projects as investments — in the future of its facilities, services and its communities. As the SFPUC upgrades its systems and operations, private sector partners join the SFPUC in being a good neighbor to the communities affected by the operation and improvement of water, wastewater, and power services. By including community benefits criteria in our Requests for Proposals (RFP) with anticipated contracts of \$5 million or more, SFPUC provides its contracting community with an opportunity to earn extra points during the bidding process for their demonstrated commitment to community benefits and environmental justice. Social Impact Partners— professional services and construction firms in fields such as engineering, architecture, resource management and technology— provide resources and opportunities in the communities where SFPUC operates and provides services. These commitments include direct financial contributions, volunteer, and in-kind
9 INDUSTRY, INNOVATION AND INFRASTRUCTURE	donations to local schools and nonprofits.  The Water System Improvement Program: The Water System Improvement Program (WSIP) is a \$4.8 billion dollar, multi-year capital program to upgrade the SFPUC's regional and local water systems. The program will deliver capital improvements that enhance the SFPUC's ability to provide reliable, affordable, high quality drinking water in an environmentally sustainable manner to 2.7 million people in the greater Bay Area. The program consists of 87 projects - 35 local projects located within San Francisco and 52 regional projects, spread over seven counties from the Sierra foothills to San Francisco. The current forecasted date to complete the overall WSIP is December 2021.  The Sewer System Improvement Program: The Sewer System Improvement Program (SSIP) is a 20-year citywide investment to upgrade our aging sewer infrastructure to ensure a reliable, sustainable and seismically safe sewer system now and for generations to come.
10 REDUCED INEQUALITIES	Environmental Justice and Land Use: The SFPUC works hard everyday to provide fundamental environmental benefits through water, power and sewer services. The SFPUC recognizes there are challenges to providing these services as some parts of our community face a greater burden than others due to the location of facilities in their neighborhoods. SFPUC works with these communities to understand their needs and lessen the effects caused by operations. The SFPUC is proud to be the first public utility in the nation to develop an environmental Justice Policy which guides efforts to support environmentally healthy and safe communities where we live, work, learn and play. As part of its mission, the SFPUC also maintains and preserves more than 590,000 acres of land to protect our natural resources and critical infrastructure. The SFPUC often has the opportunity to use land for more than one purpose and when possible, the SFPUC partners with local leaders to support innovative uses which benefit the environment and enhance the quality of life for the SFPUC's service area residents.

#### 1. PREFACE

Sustainalytics has been retained by San Francisco Public Utilities Commission (SFPUC) to support, review, and provide an opinion on its green bond framework and its alignment with the Green Bond Principles 2015 and compatibility with the draft Water Climate Bonds Standard requirements. As part of this engagement, Sustainalytics reviewed relevant public and internal documents, and held conversations with SFPUC's legal, finance, operational and sustainability teams to understand the planned use of proceeds, project selection process, and management and reporting for its green bond.

This document contains two sections:

- 1) Framework Overview, which includes a summary of SFPUC's green bond framework; and
- 2) Sustainalytics' Opinion, which is a second party opinion on the framework.

#### 2. INTRODUCTION

The SFPUC, a public utility, is a department of the City of San Francisco, and provides drinking water to the City of San Francisco and wholesale water agencies located in three Bay Area counties, wastewater services to the City of San Francisco, and green hydroelectric and solar power to retail customers and the City's municipal departments. The SFPUC's Wastewater Enterprise maintains a combined sewage and stormwater collection, treatment and disposal system, and operates and maintains 993 miles of combined sewers for homes, businesses, and street runoff. Three treatment plants treat sewage and stormwater, reducing pollution in the bay and ocean.<sup>1</sup>

SFPUC has decided to issue a green bond to finance sustainable stormwater management and wastewater projects in San Francisco. The following framework outlines the alignment of the bond to the water climate bonds standard, outlines the eligibility criteria for the use of proceeds, describes the project selection process and management of proceeds, and finally describes how the impact of the bond will be reported by SFPUC.

#### 3. FRAMEWORK OVERVIEW

For this green bond issued by SFPUC a framework has been created that follows the four key pillars of the Green Bond Principles ("GBP"):

- Use of Proceeds
- Project Selection Process
- Management of Proceeds
- Reporting

#### 3.1 Use of Proceeds

To be eligible for the green bond proceeds, the projects funded must meet one or more of the following business activity criteria:

<sup>&</sup>lt;sup>1</sup> SFPUC About Us http://www.sfwater.org/index.aspx?page=6

#### 3.1.1 Eligibility Criteria

To be eligible for the green bond proceeds, the projects funded must meet one or more of the following business activity criteria:

- 1. Wastewater treatment upgrades
- 2. Sewer collection system improvements
- 3. Stormwater management/flood control improvements

The context: The San Francisco sewer system was not constructed to withstand major earthquakes or the impacts of climate change, such as sea level rise and intense rainstorms that could overwhelm the sewer system, as it treats both sewage and stormwater runoff. Currently, more than 300 miles of sewers are more than 100 years old. SFPUC recognizes the significant challenge of operating an aging sewer system, and states that it is crucial that the system be updated before it becomes a threat to public health. The SFPUC has therefore identified wastewater treatment, sewer collection system improvements, and stormwater management as vital to climate change adaptation and to ensure the effectiveness and sustainability of the sewer system.

**Use of proceeds:** SFPUC has identified numerous projects under the Sewer System Improvement Program (SSIP) aimed at improving and strengthening wastewater treatment and sewer collection systems. These projects include, but are not limited to:

#### Wastewater treatment projects

- Replacing existing and aged and failing facilities with new Biosolids Digester Facilities
- Improving the level of screening and grit removal in existing facilities
- Replacing the antiquated oxygen generation plants
- Condition assessment and rehabilitation of building structures
- Replacing mechanical and electrical equipment
- Seismic retrofitting

#### Sewer collection system improvements projects

- Enhancing conveyance in the Channel and Islais Creek watershed to provide redundancy and increase capacity to manage storm events
- Rehabilitating and replacing interceptors, tunnels, pump stations, force mains and Transport/Storage (T/S) boxes
- Rehabilitating Combined Sewer Discharge (CSD) structures and preventing backflow of bay water through CSDs due to sea level rise

#### Stormwater management/flood control improvements projects

- Green infrastructure (bioretention planters for stormwater runoff, permeable paving)
- Flood resilience (analysis of flooding risks, stormwater detention and conveyance concepts, flood barriers)
- Hydraulic and drainage sewer improvements in flood prone neighborhoods

• Advanced rainfall and operational decision systems (automated real time forecasts with increased accuracy)

Any project that meets the business activity criteria listed above, including the new and ongoing developments of such projects, are eligible to be funded in whole or in part by an allocation of the green bond proceeds. SFPUC has selected the projects listed in Appendix A for the allocation of green bond proceeds.

#### 3.2 Project Evaluation and Selection Process

The projects included in the bond sale are part of the Sewer System Improvement Program (SSIP) Phase 1. The SSIP is a multi-billion and multi-year capital program to upgrade the City of San Francisco's aging sewer system. The program will not only modernize the system but also takes into account changes related to storm intensity and sea level rise. The projects in this bond sale are part of the \$2.9B SSIP Phase 1 and has been approved by the Commission.

Beginning in 2003, the SFPUC staff assessed the need for wastewater collection and treatment system improvements to help the SFPUC continue to meet its core mission and Wastewater Enterprise specific goals for climate change adaptation, regulatory permit compliance, system reliability and functionality, and sustainable operations. From 2009-2010 seven intensive workshops were held with the Commission that culminated in the endorsement of the Goals and Levels of Service provided in the Sewer System Improvement Program Report. In 2011 there was a presentation and discussion of the SSIP, 10-year Capital Request, and Associated Rate Impacts where the Commission authorized staff to move forward with the procurement of a Program Management Consultant (PMC) to validate the proposed program scope, schedule, and budget. The PMC started work in 2011 and conducted a detailed validation effort of the proposed SSIP projects. Three Commission validation workshops were conducted in 2012 to update both the Commission and the public on the proposed treatment and collection system projects' scope, schedule, and budget; as well as, revisions to the SSIP Goals and Levels of Service. The Program Validation workshops resulted in endorsement of the 2012 SSIP Goals and Levels of Service, validation of the staff's project scope and phased implementation process, and authorization for staff to proceed with planning and developing the proposed Phase 1 projects of the SSIP.

Over the past three years since the Commission has endorsed Phase 1 of the program, significant progress in program planning and project development of both the treatment and collection systems have occurred. The baselining efforts included a thorough review of the Goals and Levels of Service; prioritization of project scopes and costs to determine if deferral or elimination of scope was acceptable; refinement of projects, namely as a result of the receiving water model results; and, Central Bayside System Improvement Project tunnel sizing.

This effort has resulted in updated 2016 Goals, Levels of Service, Program and Phase 1 Strategies that will inform and guide project teams and a revised Program Baseline that contains better definition of project scopes, refinement of costs, and updated project schedules. In addition, other collection system needs (for example, climate change adaption to sea level rise and intense storms) and opportunities have arisen that have triggered the inclusion of Interdepartmental and Flooding projects to the SSIP. To best capture

and reflect all of these changes, SSIP staff has revised the overall Program Baseline Cost Summary and Phase 1 Project Schedules.

#### 3.3 Management of Proceeds

The amount raised through the issuance of the green bond will be equal to or less than amounts budgeted for the eligible projects listed in Appendix A.

The proceeds of the bond will be held in a dedicated bond sub-fund set up to manage and track the disbursements of the bond proceeds for eligible green projects. All the funding and disbursement for each project is recorded in an accounting system – FAMIS (Financial Accounting Management Information System), managed by the City of San Francisco.

#### 3.4 Reporting

**Funds:** SFPUC plans to report on an annual basis the amount funds allocated to eligible project and the balance remaining.

**Climate Mitigation:** SFPUC plans to report on the following KPIs at an aggregate level by facility:

- Energy generated (kW) through the new Biosolids Digester Facilities Project at the Southeast Plant and upgrades to the digester gas improvements at Oceanside Treatment Plant
- Energy saved (kW) per unit of biosolids treated to measure efficacy of energy-reducing equipment and system upgrades
- Energy saved (kW) per gallon of liquids treated to measure efficacy of energy-reducing equipment and system upgrades
- Volume of wastewater treated
- Volume of recycled water used from the new recycled water pump station at Southeast Plant

Climate Change Adaptation Plans: As one of the projects listed in Appendix A, SFPUC is undertaking a comprehensive climate change vulnerability and risk assessment related to the wastewater and stormwater assets, culminating in an SSIP Climate Change Adaptation Plan. Part of this plan has been applied to Phase 1 SSIP projects by providing insight to inform design and operation strategies and manage climate change risks. SFPUC may provide descriptions and details of climate change adaption plans and strategies, and which projects will be implemented to achieve them. Examples include:

- Reduce climate change impacts by constructing and modifying facilities to meet sea level rise
  projections, as well as modifying combined sewer discharges to prevent backflow due to sea level
  rise.
- Address water diversion/navigation, flood management, and stormwater runoff by upgrading the
  system to meet the Level of Service storm. These systems include conveyance (tunnels, sewers,
  pump stations, force mains), green infrastructure, stormwater detainment, and rainfall
  prediction. Combined sewer reductions and flooding reduction impacts are computer-modeled
  as part of project planning.

For a detailed list of reporting commitments, please refer to Appendix B

#### 4 SUSTAINALYTICS' OPINION

Impact of climate change on wastewater management: According to the Intergovernmental Panel on Climate Change (IPCC), wastewater management is "an important sustainable development goal because it can lead directly to improved health, productivity of human resources, and better living conditions." In its 2007 Annual Report, the IPCC stated that improving wastewater treatment and storm water management can provide multiple benefits for climate change mitigation and adaptation, including GHG emissions reduction through the use of energy-efficient facilities, conservation of water resources and water and soil pollution reduction.<sup>3</sup>

Wastewater treatment and storm water management are projected to become even more difficult due to climate change and the associated changes in temperatures, precipitation patterns, sea level rise and storm-related damages. Climate conditions in the San Francisco Bay Area will change over the next century, posing a unique challenge. Changes in precipitation patterns may result in severe rainfall events, which, together with sea level rise, may overwhelm stormwater run-off systems and impact water qualities or result in localized flooding. Inadequate storm-proofing will likely cause significant risk to life, damage to property, infrastructure and environment.

To address these challenges, the sewer improvement projects financed under the San Francisco Public Utilities Commission green bond are expected to provide multiple opportunities for climate mitigation and adaptation. New "green" facilities will help reduce GHG emissions, contributing climate mitigation. Treatment and reuse of wastewater and storm water, as well as storm-proofing will serve as effective climate adaptation measures in the coastal environment, which is also prone to severe droughts and water scarcity.

**Water Climate Bond Certified:** In issuing the green bond aligned with the Water Climate Bonds Standard, the SFPUC is demonstrating its commitment to addressing the climate change risks on water infrastructure and a strong commitment to transparency. The bond has been verified against criteria that examined SFPUC's vulnerability assessment and climate change adaptation plan, and is the first bond to receive certification under this new water standard.

#### Alignment with Green Bond Principles:

Principle	In line with GBP 2015?	Comments
Use of Proceeds	Yes	The Use of Proceeds of this bond are clearly described in the public offering statement. Furthermore, sustainable water management is one of the broad categories recognized by the GBP as offering clear environmental benefits. Based on Sustainalytics' review, these projects help in mitigating climate change impacts by GHG emissions reduction through the use of energy-

 $<sup>^2\</sup> https://www.ipcc.ch/pdf/assessment-report/ar4/wg3/ar4\_wg3\_full\_report.pdf$ 

<sup>&</sup>lt;sup>3</sup> https://www.ipcc.ch/pdf/assessment-report/ar4/wg3/ar4\_wg3\_full\_report.pdf

		efficient facilities and conservation of water resources. In addition, all these project have been evaluated against climate change risks with emphasis on climate change adaptation and projects adjusted or modified to deal with long-term impacts of climate changes such as sea level rise.
Project selection process	Yes	The projects selected for the bond are part of SSIP Phase1. The current SSIP program was a result of a multi-year assessment that included, among other things, climate change mitigation and adaptation considerations.
Management of Proceeds	Yes	A sub-account specific to the bond will be set up and the disbursement to corresponding project will be tracked in the FAMIS system.
Reporting	Yes	SFPUC will report the KPIs mentioned in the reporting section above on an aggregate level and where possible at a project level. In addition, SFPUC will share details about climate change adaptation plans for the eligible projects. Providing such detailed reporting on climate change mitigation and adaptation is a best practice within water green bond issuances.

#### Conclusion

By financing projects in wastewater treatment and stormwater management, SFPUC aims to reduce GHG emissions in its facilities, improve water conservation, and manage climate change risks by addressing system vulnerabilities, actions recognized by the Intergovernmental Panel on Climate Change as effective climate mitigation and adaptation measures.

SFPUC's approach to selecting projects and managing green bond proceeds is robust, and its reporting on the use of proceeds, with KPIs that capture energy and water impacts, is transparent. SFPUC's green bond follows the guidance provided by the Green Bond Principles 2015 and is in alignment with its four pillars – the use of proceeds, process of project evaluation and selection, management of proceeds and reporting. Furthermore, the SFPUC's Green Bond has been certified according to the Water Climate Bond Standard, the first green bond to achieve this certification. Based on the above considerations, Sustainalytics is of the view that SFPUC's green bond is robust and credible.

#### **APPENDICES**

#### **Appendix A: Eligible projects examples**

Wastewater Bond	Wastewater Bonds Series 2016 - Project List						
PROJECT	TITLE	2016 Bonds					
Sewer System Imp	Sewer System Improvement Program (SSIP)

#### **SUSTAINALYTICS**

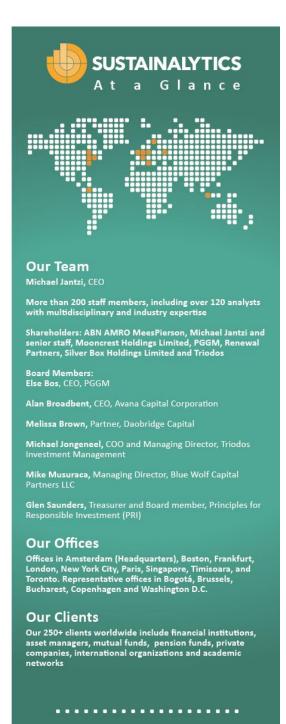

Sustainalytics is the largest independent provider of sustainability research, analysis, and services to investors. We serve over 250 institutional investors which include some of the world's largest asset owners and asset managers. Through over 20 years of experience serving the responsible investment (RI) market, we have gained a reputation for providing high-quality ESG research solutions and excellent client service.

Sustainalytics is headed by seasoned professionals in the field of business, finance, and sustainability, with a wealth of experience in the Responsible Investment area. After more than 20 years of local experience and expertise in the Responsible Investment (RI) market Sustainalytics has developed a comprehensive understanding of trends and best practices and a solid process to assist organisations in integrating ESG considerations into their policies and strategies. We have worked with some of the world's financial institutions including pension plans, investment managers and banks providing customised support to help them achieve their RI objectives. Clients include ABN AMRO, APG, BBVA, BNP Paribas, Deutsche Bank, ING Bank, Lombard Odier, Lloyds Bank, Triodos Bank, UBS and over 250 other financial institutions and organisations.

Sustainalytics now has a staff of 250 employees globally, including over 120 analysts, with operations in Amsterdam, Boston, Bucharest, Frankfurt, New York, Paris, London, Singapore, Sydney, Timisoara, and Toronto, and representation in Brussels and Washington DC.

In 2015, Sustainalytics was named the Best SRI or Green Bond Research Firm by GlobalCapital. In December 2014, for the third year in a row, Sustainalytics was named best sustainable and responsible investment research firm in the Independent Research in Responsible Investment (IRRI) Survey, conducted by Thomson Reuters and SRI-CONNECT.

The Opinion was drawn up with the aim to explain why the analyzed bond is considered sustainable and responsible. Consequently, this Opinion is for information purposes only and Sustainalytics will not accept any form of liability for the substance of the opinion and/or any liability for damage arising from the use of this Opinion and/or the information provided in it.

As the Opinion is based on information made available by the client, Sustainalytics does not warrant that the information presented in this Opinion is complete, accurate or up to date.

Nothing contained in this Opinion shall be construed as to make a representation or warranty, express or implied, regarding the advisability to invest in or include companies in investable universes and/or portfolios. Furthermore, this Opinion shall in no event be interpreted and construed as an assessment of the economic performance and credit worthiness of the bond, nor to have focused on the effective allocation of the funds' use of proceeds.

The client is fully responsible for certifying and ensuring its commitments` compliance, implementation and monitoring.

#### San Francisco Public Utilities Commission

#### PROGRAMMATIC POST-ISSUANCE VERIFICATION LETTER

#### WATER INFRASTRUCTURE CRITERIA OF THE CLIMATE BONDS STANDARD

Type of engagement: Assurance Engagement

Period engagement was carried out: September 2019

**Approved verifier:** Sustainalytics

Contact address for engagement: 125 Maiden Lane, Suite 602, New York NY 10038, U.S.A

Post-Issuance Engagement Leader: Ankita Shukla, <a href="mailto:ankita.shukla@sustainalytics.com">ankita.shukla@sustainalytics.com</a>, + 1 (617) 603 3329 Post-Issuance Engagement Support: Tina Ghaemmaghami, tina.ghaemmaghami@sustainalytics.com, + 1

(647) 264 6680

#### **Scope and Objectives**

In 2016, San Francisco Public Utilities Commission ("SFPUC") issued green bonds aimed at financing green infrastructure projects within the Sewer System Improvement Program (SSIP). In September 2019, SFPUC engaged Sustainalytics to review the projects funded through the issued green bonds and provide an assessment as to whether the projects met the Post-Issuance Requirements (Part A, Part B and Part C) of the Climate Bonds Standard.<sup>1</sup>

Green bond projects include:2

• Wastewater Revenue Bonds Series 2016 A (Green Bonds)

Schedule 1 provides details of the green bond projects and Disbursement of Proceeds.

#### **Compliance Evaluation Criteria**

Post-issuance requirements under Climate Bonds Standards Version 2.1:

- Part A: General Requirements All the requirements in Part A shall be met to be eligible for postissuance certification.
- Part B: Eligible Projects & Assets Part B requirements shall be met based on the projects & assets associated with the bond and the specified eligibility criteria.
- Part C: Requirements for Specific Bond Types Part C requirements shall be met to be eligible for post-issuance certification and are used selectively, depending on the type of bond in question.

#### Issuing Entity's Responsibility

SFPUC is responsible for providing accurate information and documentation relating to the details of the projects that have been funded, including description of projects, total development cost of each projects, and disbursed amounts.

#### **Independence and Quality Control**

Sustainalytics, a leading provider of ESG and corporate governance research and ratings to investors, conducted the verification of SFPUC's green bond, issued to finance eligible projects, and provided an independent opinion informing SFPUC as to the conformance of the green bond with the Post-Issuance requirements and Water Infrastructure criteria of the Climate Bonds Standard.

<sup>&</sup>lt;sup>1</sup> Pre-Issuance Verification Letter available here:

https://www.climatebonds.net/files/files/SF%20PUC%20Green%20Bond%20May%202016%20Sustainalytics%20pre%20issuance%20letter.pdf

<sup>&</sup>lt;sup>2</sup> Wastewater Enterprise Green Bonds Annual Report available here: https://sfwater.org/modules/showdocument.aspx?documentid=13672

Sustainalytics has relied on the information and the facts presented by SFPUC with respect to the Nominated Projects. Sustainalytics is not responsible nor shall it be held liable if any of the opinions, findings, or conclusions it has set forth herein are not correct due to incorrect or incomplete data provided by SFPUC.

Sustainalytics makes all efforts to ensure the highest quality and rigor during its assessment process and enlisted its Sustainability Bonds Review Committee to provide oversight over the assessment of the bond.

#### Verifier's Responsibility

Sustainalytics conducted the verification in accordance with the Climate Bonds Standard Version 2.1 and with International Standard on Assurance Engagements 3000 (ISAE 3000) – Assurance Engagements other than Audits or Reviews of Historical Information.

The work undertaken as part of this engagement included conversations with relevant SFPUC employees and review of relevant documentation to confirm the conformance of SFPUC's green bonds with the Programmatic Post-Issuance Requirements (Part A, Part B and Part C) of the Climate Bonds Standard Version 2.1.

#### **Exceptions**

No exceptions were identified.

All projects aligned with the Post-Issuance requirements of the Climate Bonds Standard and were in conformance to the Water Infrastructure criteria.

#### Conclusion

Based on the limited assurance procedures conducted, nothing has come to Sustainalytics' attention that causes us to believe that, in all material respects, the allocation of the following SFPUC green bonds, issued to fund eligible green wastewater enterprise projects, is not in conformance with the Post-Issuance requirements of the Climate Bonds Standard.

USD 258.563.066 from 2016 Series A

#### **Detailed Findings**

Eligibility Criteria	Procedure Performed	Factual Findings	Error or Exceptions Identified
Compliance to Part A: General Requirements	Verification of 6 projects funded by the 2016 Wastewater Series A green bond to determine if Part A: General Requirements were met (See Schedule 2A and 2B).	All 6 projects reviewed complied with the General Requirements.	None
Compliance to Part B: Eligible Projects & Assets	Verification of 6 projects funded by the green bond in 2016 Wastewater Series A green bond to determine if projects fall into (i) one of the investment areas of the Climate Bonds Taxonomy (ii) meet the Water Infrastructure technical criteria.	All 6 projects fall under the Water Infrastructure criteria and meet the requirements of the Water Infrastructure technical criteria.	None
Compliance to Part C: Requirements for Specific Bond Types	Bond Type Applicable: Use of Proceeds Bond.	The requirements of Project Holding, Settlement Period and Earmarking have been met.	None

## **Schedule 1: Detailed Overview of Nominated Projects and Assets**

San Francisco Public Utilities Commission Green Series Snapshot (as of June, 2018)				
2016 Series A Projects				
Project <sup>3</sup>	Total Bond Amount			
Collective System Improvements	\$62,076,000			
Central Bayside System Improvement	\$19,800,000			
Stormwater Management/Flood Control (SIPFC)	\$49,417,066			
Northshore To Channel Force Main	\$20,270,000			
SSIP Program-Wide Management	\$94,000,000			
Urban Watershed Assessment Project	\$13,000,000			
2017 Series A Total	\$258,563,066			

<sup>&</sup>lt;sup>3</sup> Eligible projects include all SSIP Projects, subset only listed

# **Schedule 2A: Post-Issuance General Requirements of the Climate Bonds Standard**

Nominated Projects & Assets	4.1	Statement on the environmental objectives of the bond		
	4.2	Nominated Projects meet the Climate Bonds criteria		
	4.3	Confirmation that Nominated Projects and Assets will not be nominated to other Climate Bonds		
Use of Proceeds	5.1	Net Proceeds of the bond allocated to the Nominated Projects		
	5.2	Funds allocated to Nominated Projects within 24 months of issuance of the bond		
	5.3	Estimate of the share of the Net Proceeds used for financing and refinancing		
	5.4	Net Proceeds of the bond shall be tracked by the Issuer following a formal internal process		
	5.5	Net Proceeds of the bond shall be no greater than the total investment or the total Fair Market Value of the Nominated Projects & Assets at the time of issuance		
Non-Contamination of	6.1	Tracking of proceeds		
Proceeds	6.2	Managing of unallocated proceeds		
	6.3	In the case of a Force Majeure, the Issuer may apply to the Climate Bonds Standard Board for an extension to the asset allocation period		
Confidentiality	7.1	Information about the Nominated Projects & Assets provided to the Verifier and to the Climate Bonds Standard Board		
	7.2	Issuer should disclose information about the bond and the Nominated Projects & Assets to the market		
Reporting Post-Issuance	8.1	Report containing the list of Nominated Projects & Assets to which proceeds of the bond have been allocated		

# **Schedule 2B: Conformance to the Post-Issuance Requirements of the Climate Bonds Standard**

Procedure Performed	Factual Findings	Error or Exceptions Identified
Verification of Nominated Projects & Assets	<b>4.1</b> The objective of the bond is to primarily use proceeds to finance projects within the Sewer System Improvement Program (SSIP).	None
	<b>4.2</b> SFPUC's management confirms that the nominated projects meet the Eligibility Criteria.	
	<b>4.3</b> SFPUC's management confirms that the projects shall not be nominated to other Climate Bonds.	
Verification of requirements specified under Use of Proceeds	<ul><li>5.1 Net Proceeds of the bond have been allocated to the 6 Nominated Projects.</li></ul>	None
	<b>5.2</b> SFPUC's management has confirmed that funds have been allocated to Nominated Projects within 24 months of the issuance.	
	<b>5.3</b> SFPUC's management has confirmed that all Net Proceeds of the bond were used for financing only.	
	<b>5.4</b> SFPUC's management has confirmed that Net Proceeds of the bond shall be tracked by the Issuer following a formal internal process.	
	5.5 SFPUC's management has confirmed that the Net Proceeds of the bond shall be no greater than the total investment in the Nominated Projects or the Total Development Cost of the Nominated Projects.	
Verification of requirements specified under Non- Contamination of Proceeds	6.1 SFPUC's management confirms that the proceeds have been segregated and tracked in a systematic manner and were exclusively used to finance Nominated Projects.	None
	6.2 SFPUC's management confirms that pending the investment of proceeds, they shall be held in temporary investment instruments (i) that are cash, or cash equivalent instruments, within a Treasury function; or (ii) that do not include greenhouse gas intensive projects which are inconsistent with the delivery of a low carbon and climate resilient economy.	
\/	6.3 N/A	
Verification of requirements specified under Confidentiality	7.1 SFPUC's management confirms that all relevant information about the Nominated Projects has been provided to the Verifier and to the Climate Bonds Standard Board to support the assessment of conformance with the Climate Bonds Standard.	None

	7.2	SFPUC's management confirms that all relevant information about the bond and the Nominated Projects has been disclosed to the market.	
Verification of requirements specified under Reporting Post-Issuance	8.1	SFPUC's management has provided a report containing the list of Nominated Projects to which proceeds of the bond have been allocated (See Schedule 1).	None

Nothing contained in this deliverable shall be construed as to make a representation or warranty on the part of Sustainalytics, express or implied, regarding the advisability to invest in companies, selection of projects or make any kind of business transactions. It shall not be construed as an investment advice (as defined in the applicable jurisdiction), nor be interpreted and construed as an assessment of the issuer's economic performance, financial obligations nor its creditworthiness.

The issuer is fully responsible for certifying and ensuring the compliance with its commitments, for their implementation and monitoring.

#### **Sustainalytics**

Sustainalytics is a leading independent ESG and corporate governance research, ratings and analytics firm that supports investors around the world with the development and implementation of responsible investment strategies. With 13 offices globally, the firm partners with institutional investors who integrate ESG information and assessments into their investment processes. Spanning 30 countries, the world's leading issuers, from multinational corporations to financial institutions to governments, turn to Sustainalytics for second-party opinions on green and sustainable bond frameworks. Sustainalytics has been certified by the Climate Bonds Standard Board as a verifier organization, and supports various stakeholders in the development and verification of their frameworks. In 2015, Global Capital awarded Sustainalytics "Best SRI or Green Bond Research or Ratings Firm" and in 2018 and 2019, named Sustainalytics the "Most Impressive Second Party Opinion Provider. The firm was recognized as the "Largest External Reviewer" by the Climate Bonds Initiative as well as Environmental Finance in 2018, and in 2019 was named the "Largest Approved Verifier for Certified Climate Bonds" by the Climate Bonds Initiative. In addition, Sustainalytics received a Special Mention Sustainable Finance Award in 2018 from The Research Institute for Environmental Finance Japan the Minister of the Environment Award in the Japan Green Contributor category of the Japan Green Bond Awards in 2019.
