

# 2023-24

San Francisco Public Utilities Commission  
Water Enterprise | FY 2023-24

# Green Bond Report 2023-24

San Francisco  
**Water Power Sewer**  
Services of the San Francisco Public Utilities Commission

# Table of Contents

## 1) Introduction

## 2) Water Enterprise Green Bond Impact Report

- a. Green Bond Proceeds
- b. Project Environmental Impacts Aligned with United Nations Sustainable Development Goals
- c. Case Study: Watershed and Environmental Improvement Program

**Appendix A:** State, City and SFPUC Regulations, Policies, and Programs

**Appendix B:** SFPUC Green Bond Program

**Appendix C:** SFPUC Climate and Social Inclusion Impacts Aligned to the United Nations Sustainable Development Goals

**Note:** Green Bond Verification Reports are available at <https://sfpuc.org/about-us/reports/debt-management-and-disclosure-reports>

O'Shaughnessy Dam

## Introduction

The San Francisco Public Utilities Commission (SFPUC) is a department of the City and County of San Francisco (City or San Francisco) responsible for the maintenance, operation and development of three utility enterprises: the Water Enterprise, the Wastewater Enterprise and Power Enterprise. Since the release of its first Climate Action Plan in 2004, San Francisco has been leading the way on local climate action, environmental justice, and developing and implementing innovative programs and outreach campaigns to engage with all San Franciscans.

These Climate Action Plans impact all San Francisco departments, including the SFPUC, and influence operating and capital investment activities. The SFPUC provides top quality drinking water and wastewater services to the City of San Francisco, wholesale water to three other Bay Area counties, and clean, reliable energy to San Francisco residents, businesses, and municipal departments. Located in the State of California (State), the SFPUC is governed by Federal, State and local laws and regulations, as well as policies and programs within the SFPUC, created to achieve additional climate and social inclusion goals. Notably, the SFPUC was the first utility in the nation to pass Environmental Justice and Community Benefits Policies with the goal of proactively providing diverse communities with opportunities in workforce and economic development, the arts, urban agriculture, and education.

The SFPUC views green bonds as an important tool to help meet these goals and finance low-carbon, climate-resilient infrastructure. Since issuing its first series of green bonds in Fiscal Year 2015, the SFPUC has sold more than \$4.3 billion in certified green bonds from its Water and Wastewater enterprises and more than \$100 million in self-designated green bonds from its Power Enterprise. Impacts from the projects financed by green bonds issued by the SFPUC's three enterprises include increased water storage, application of green infrastructure to manage stormwater, upgrades to renewable energy generation facilities, and the construction of green infrastructure to divert stormwater from treatment plants.

In addition to providing project spending and project impact information, this report highlights associated project co-benefits and describes the context in which climate and social inclusion inform the SFPUC's capital planning decisions. This report reflects activities through June 30, 2024.

Lake Merced Groundwater Well Station

This report speaks only as of June 30, 2024. The SFPUC has not undertaken, and does not undertake, to provide any updates to this report in the future. The publication of this report does not constitute or imply any representation (i) that the information in the report is material to investors, (ii) regarding any other material financial, operating or other information about the SFPUC or its outstanding bonds or other indebtedness or (iii) that no other material circumstances or material events have occurred or that no other material information exists concerning the SFPUC or its outstanding bonds or other indebtedness. This report is not a recommendation to buy, sell or hold any bonds or obligations of the SFPUC.

## GREEN BOND DESIGNATION AND CERTIFICATION

Generally, the SFPUC designates certain of its bonds as “Green Bonds” when the proceeds of such bonds are used to finance or refinance environmentally beneficial projects based upon criteria applied by the SFPUC. With respect to the Water Enterprise, the SFPUC considers projects included in its Water System Improvement Program (WSIP) to be environmentally beneficial projects. Investors’ criteria for determining whether bonds finance or refinance environmentally beneficial projects and/or are appropriately designated as “Green Bonds” may differ from the criteria applied by the SFPUC.

The following bonds (Bonds or Green Bonds) issued by the SFPUC’s Water Enterprise from Fiscal Year 2015 through Fiscal Year 2024 have been certified by the Climate Bonds Initiative (CBI) under the Climate Bonds Standard established by the CBI:

Water Revenue Bonds, 2016 Sub-Series C (Green Bonds – Federally Taxable)
Water Revenue Bonds, 2017 Sub-Series A (WSIP) (Green Bonds)
Water Revenue Bonds, 2017 Sub-Series D (Refunding) (Green Bonds)
Water Revenue Bonds, 2017 Sub-Series G (Refunding – Federally Taxable) (Green Bonds)
Water Revenue Bonds, 2019 Sub-Series A (Refunding – Federally Taxable) (Green Bonds)
Water Revenue Bonds, 2020 Sub-Series A (WSIP) (Green Bonds)
Water Revenue Bonds, 2020 Sub-Series E (Refunding – Federally Taxable) (WSIP) (Green Bonds)
Water Revenue Bonds, 2023 Sub-Series C (Refunding) (Green Bonds) <sup>1</sup>

The explanation of the significance of such certification may be obtained from the CBI<sup>2</sup>. Such Bonds have been certified by CBI based upon verification by Morningstar Sustainalytics (Sustainalytics), a verifier approved by the Climate Bonds Standard Board and retained by the SFPUC. Sustainalytics has verified that bonds issued by the SFPUC to finance and refinance projects included in the WSIP meet the requirements of the Water Infrastructure Criteria of the Climate Bonds Standard Version 2.1. Verification by Sustainalytics and the certification of such Bonds by CBI based upon such verification reflect only the views of Sustainalytics and CBI. Verification reports by Sustainalytics are available at <https://sfpu.org/about-us/reports/debt-management-and-disclosure-reports>. The website is provided for convenience only and the information available on such website is not incorporated by reference into this report.

<sup>1</sup> The Water Revenue Bonds, 2025 Series A was subsequently issued in the following fiscal year on April 17, 2025 and will be included in the next annual report.

<sup>2</sup> <https://www.climatebonds.net/> The website is provided for convenience only and the information available on the website is not incorporated by reference into this report.

## Water Enterprise Green Bond Impact Report

The Green Bonds have been issued to finance and refinance projects in the Water System Improvement Program (WSIP). The WSIP is a \$4.8 billion program consisting of 87 capital projects to repair, replace, and upgrade critical portions of the Regional and Local Water System. These projects were designed to meet specific objectives, which include the following:

- Improve the water system to provide high-quality water that reliably meets all current and foreseeable local, State, and federal requirements.
- Reduce vulnerability of the water system to damage from earthquakes.
- Increase system reliability to deliver water by providing the redundancy needed to accommodate outages.
- Provide improvements related to water supply/drought protection.
- Enhance sustainability through improvements that optimize protection of the natural and human environment.

The Local Program consists of 35 projects that are located within the city limits of San Francisco and benefit only San Francisco residents. Local Program projects are typically smaller in size than Regional Program projects and include improvements to existing in-city distribution pipelines, storage reservoirs/tanks, pump stations and miscellaneous facilities. The costs of Local Program projects are absorbed into the retail rates of San Francisco customers. The Local Program was completed in June 2020.

The Regional Program consists of 52 projects that are located mostly outside of the city limits of San Francisco and benefit both San Francisco residents and the 27 wholesale customers. These projects are typically much larger than Local Program projects and include a wide variety of improvements such as upgrades to, and the addition of, new treatment, transmission (pipelines, tunnels, pump stations), and storage (dams and reservoirs) facilities spread over seven different counties (Tuolumne, Stanislaus, San Joaquin, Alameda, Santa Clara, San Mateo, and San Francisco). The costs of projects within the Regional Program are incorporated into the rates paid by both retail customers and wholesale customers. As of June 30, 2024, the Regional Program is 99% complete.

The ongoing Regional Program projects are the Alameda Creek Recapture project and the Regional Groundwater Storage and Recovery project. The Alameda Creek Recapture Project includes construction of facilities in and around an existing quarry pit in Sunol Valley to recapture water that will be released from Calaveras Reservoir and/or bypassed around the Alameda Creek Diversion Dam during future operations of Calaveras Reservoir. Construction of the facility started in June 2021. In April 2023, the SFPUC terminated the project's construction contract due to concerns regarding worsening pond slope erosion, anticipated facility operating and maintenance complexity, and excessive change orders to redesign the facility to accommodate the erosive slope conditions. The project is being re-evaluated for short-term and long-term slope stability remediation and to consider improvements for operation and maintenance sustainability. The SFPUC will work with the quarry operator to stabilize the pond banks and re-evaluate the facility design to simplify operation and maintenance requirements. It is anticipated that a new construction contract will be issued using a design/build project delivery method and explore the possibility of adding initial operation and maintenance scope as part of the contract. The project is anticipated to be completed in 2032.

The Regional Groundwater Storage and Recovery Project has been divided into two phases. The Phase 1 construction contract, which includes the construction of up to 16 new groundwater recovery wells and test wells, chemical treatment equipment, pumping systems and pipelines, and other associated facilities, was completed in September 2022 and closed out in January 2023. Phase 2 has been divided into two construction contracts (Phases 2A and 2B); Phase 2 will provide improvements to the wells installed under Phase 1 to provide corrosion protection and other operational improvements, as well as to complete installation and connection of the South San Francisco Main Well. The Phase 2A contract to install cathodic protection and other improvements to some of the wells started construction in June 2022 and is anticipated to be completed in early 2025. The Phase 2B contract for installation of the South San Francisco Main Well facility and pipeline started construction in 2024 and is anticipated to be completed in 2026.

The Regional Program is further divided into the following categories of projects:

- **San Joaquin Regional Projects:** These projects are designed to improve water delivery reliability by augmenting three existing transmission pipelines that transmit the Hetch Hetchy water supply across the San Joaquin Valley and enhance water quality by building the Tesla Disinfection Facility, a new advanced disinfection/treatment facility for the SFPUC's largest source of supply.
- **Sunol Valley Regional Projects:** The projects within this region are designed to address delivery and seismic vulnerabilities associated with the delivery of Hetch Hetchy water through the Sunol Valley and water originating from the Alameda Watershed. Projects include the construction of a new Calaveras Dam, a fourth Alameda Siphon, a new (second) Irvington Tunnel, and other connecting large-diameter pipelines, as well as upgrades to the existing Sunol Valley Water Treatment Plant and San Antonio Pump Station. All these facilities are within or near the Calaveras Fault influence zone.
- **Bay Division Regional Projects:** The projects within this region address the seismic vulnerability of the four Bay Division Pipelines, which transmit the blend of Hetch Hetchy and Sunol Valley water across the San Francisco Bay to the Peninsula and serve a large number of wholesale customers. The projects in this region address the crossing of the Hayward Fault and system vulnerability associated with the proximity of the San Andreas Fault; and add system redundancy and operational flexibility.
- **Peninsula Regional Projects:** The projects within this region are generally designed to address facility seismic vulnerabilities and meet water quality and delivery goals for facilities delivering and treating water from the Crystal Springs, San Andreas and Pilarcitos Reservoirs. Projects include the construction of a new Crystal Springs Bypass Tunnel and large-diameter pipelines, as well as upgrades to the existing Harry Tracy Water Treatment Plant, the Pulgas Balancing Reservoir, and the Lower Crystal Springs Dam. All these facilities are located within the San Andreas Fault influence zone.
- **San Francisco Regional Projects:** The projects within this region include the seismic retrofit of the Sunset and University Mound Terminal Reservoirs, and a groundwater storage and recovery project. The two reservoir projects are located within the City but can be used to supply water back to the Northern Peninsula, which can benefit the Wholesale Customers. The groundwater project includes improvements in both San Mateo and San Francisco counties.

- **Support Projects** (formally System Wide Region): In July 2011, the System Wide Region was renamed as Support Projects. These projects include:
  1. System security upgrades, which involves the development and integration of security components at critical water system facilities.
  2. The Programmatic Environmental Impact Report (PEIR), which was prepared in compliance with CEQA to identify and analyze potential programmatic environmental impacts of the proposed system improvements.
  3. The Watershed Environmental Improvement Program, which consists of conservation easements and/or fee title purchase of property from willing landowners to permanently protect Alameda Creek Watershed lands.
  4. The Bioregional Habitat Restoration project (formerly Habitat Reserve Program), which is intended to provide a coordinated and consolidated approach to compensate for habitat impacts that would result from the implementation of the WSIP projects in the San Joaquin, Sunol Valley, Bay Division and Peninsula Regions of the Regional Water System.
  5. Vegetation Restoration of WSIP Construction Sites, which was added to the Program in March 2014 to provide maintenance, monitoring and reporting of onsite habitat restoration installed at the various WSIP construction sites, and
  6. Regional Program management.

**Green Bond Spending Details**

Proceeds from each issuance of Bonds are separately tracked and allocated to designated eligible projects. Spending by bond series is detailed below.

In the indenture pursuant to which Bonds have been issued, the SFPUC has reserved the right to reallocate the use of the bond proceeds among various projects. In the following tables, a reduction in the allocation of bond proceeds to a particular project does not necessarily mean that such project will not proceed or that the scope of such project has been reduced. Further, the amount of bond proceeds allocated to a particular project does not necessarily reflect the total cost of such project. The “Estimated Use of Proceeds” column represents total projected spending for the bonds by project at the time of bond issuance. The “Spending from Prior Years” column represents the proceeds spent in years prior to the reported fiscal year. The “Fiscal Year 2023-24 Spending” column represents proceeds spent in the reported fiscal year. The “Total Expended” column represents all proceeds spent in the reported fiscal year and all prior years.

## Green Bond Proceeds

### Water Revenue Bonds, 2016 Sub-Series C (Green Bonds – Federally Taxable) As of June 30, 2024

Project	Project Number	Estimated Use of Proceeds	Spending from Prior Years*	Fiscal Year 2023-24 Spending	Total Expended*
Bond/Commercial Paper Expense	CUW30001	\$3,084,618	\$8,607,094	-	\$8,607,094
Adit Leak Repairs	CUW35701	19,471,358	-	-	-
Regional Groundwater Storage & Recovery	CUW30103	9,752,541	15,607,774	-	15,607,774
Recycled Water Project	CUW30201	-	1,910	987,656	989,566
New Irvington Tunnel	CUW35901	3,534,658	(209,051)	-	(209,051)
Upper Alameda Creek Filter Gallery	CUW35201	1,856,862	2,453,723	-	2,453,723
Seismic Bay Division Pipeline @ Hayward Fault Ph 2	CUW35302	3,181,724	679,623	-	679,623
Lower Crystal Springs Dam Improvements	CUW35401	-	1,092	-	1,092
New Crystal Springs Bypass Tunnel	CUW35601	170	170	-	170
Alameda Siphon #4	CUW35902	74,987	19,471,358	-	19,471,358
Security Systems Upgrades	CUW36302	1,225,367	178,464	-	178,464
Harry Tracy Water Treatment Plant Long Term Improvements	CUW36701	35,659,426	33,505,436	-	33,505,436
Peninsula Pipeline Seismic Upgrade	CUW36702	1,109	6,794	-	6,794
Bay Division Pipeline Reliability Upgrade – Tunnel	CUW36801	83,385,032	81,724,603	-	81,724,603
Bay Division Pipeline Project Reliability – Pipeline	CUW36802	42,522,804	42,027,030	-	42,027,030
Crystal Springs Pump Station & Crystal Springs – San Andreas Pipeline	CUW37101	11,682	381,634	-	381,634
San Joaquin Pipeline System	CUW37301	-	10	-	10
Rehab Existing San Joaquin Pipelines	CUW37302	-	1,673	-	1,673
Calaveras Dam Replacement	CUW37401	32,848,192	22,263,983	-	22,263,983

\*Negative amounts reflect accounting reallocations.

## Project Impacts Aligned with the United Nations Sustainable Development Goals (SDGs)<sup>1</sup>

The links provided in this section are provided for convenience only and the information available on such pages is not incorporated by reference into this report.

Project Name	Project Number	UN SDGs <sup>2</sup>	Project and Environmental Impact Description	California Environmental Quality Act
Watershed and Environmental Improvement Program	CUW39401	 	Proactively manage, protect, and restore environmental resources affected by Water System Improvement Program operations.	<a href="#">Program Environmental Impact Report</a>
Baden & San Pedro Valve Lots Improvements	CUW39101	 	Implement structural upgrades to ensure operational flexibility in the event of an emergency, impacting a service population of 805,000.	<a href="#">Mitigated Negative Declaration</a>
SFPUC/EBMUD Intertie	CUW38901	 	Improve water delivery and supply reliability to City of Hayward, a population of 155,000.	<a href="#">Program Environmental Impact Report</a>
Vegetation Restoration of WSIP Sites	CUW38803	 	Restore and re-vegetate habitat areas temporarily impacted by construction at Water System Improvement Program sites to pre-construction condition.	<a href="#">Program Environmental Impact Report</a>
Bioregional Habitat Reserve Program	CUW38802	 	Coordinate and consolidate approach to preserve, enhance, restore, or create about 2,350 acres of various habitats.	<a href="#">Program Environmental Impact Report</a>
Program Environmental Impact Report	CUW38801	     	Analyze the environmental impact of the entire Water System Improvement Project.	<a href="#">Program Environmental Impact Report</a>
Tesla Treatment Facility	CUW38401	  	Improve sustainable infrastructure by combining ultraviolet (UV) water treatment with a chemical treatment, impacting 2.7 million customers.	<a href="#">Final Environmental Impact Report</a>

Determinations that project impacts align with certain United Nations Sustainable Development Goals (SDGs) are based on criteria the SFPUC has deemed to be appropriate and may differ from criteria applied by investors.

<sup>1</sup> For more project information, including environmental impacts, budget and schedule, please see [Water Infrastructure Improvements](#).

<sup>2</sup> Developed in consultation with SFPUC senior management and [ICMA Green and Social Bonds: A High-Level Mapping to the Sustainable Development Goals](#); SDG impacts have not been verified by a third-party.

Project Name	Project Number	UN SDGs <sup>2</sup>	Project and Environmental Impact Description	California Environmental Quality Act
Sunol Valley Water Treatment Plant Expansion/Treated Water Reservoir	CUW38101	  	Increase water supply to 160 million gallons per day, impacting 2.7 million customers.	<a href="#">Final Environmental Impact Report</a>
San Andreas #3 Pipeline Installation	CUW37901	 	Installation of water pipeline to San Francisco service area of 805,000. Water transmission is largely gravity fed requiring minimal fossil fuel consumption.	<a href="#">Final Environmental Impact Report</a>
Crystal Springs Pipeline #2 Replace (In City)	CUW37801	 	Improve seismic reliability of a pipeline delivering water to the San Francisco Peninsula. Water transmission is largely gravity fed requiring minimal fossil fuel consumption.	<a href="#">Final Environmental Impact Report</a>
San Antonio Backup Pipeline	CUW37403	 	Increase operational flexibility and delivery reliability during climate and seismic emergencies, impacting 2.7 million customers. Water transmission is largely gravity fed requiring minimal fossil fuel consumption.	<a href="#">Final Environmental Impact Report</a>
Calaveras Dam Replacement	CUW37401	    	Replace a seismically vulnerable old dam with a new dam, including a fish ladder that supports and restores native aquatic resources. Dam provides water supply to 2.7 million customers.	<a href="#">Final Environmental Impact Report</a>
Rehab Existing San Joaquin Pipelines	CUW37302	 	Establish a program of routine maintenance to ensure water delivery reliability to the entire San Francisco Peninsula, impacting 2.7 million customers. Water transmission is largely gravity fed requiring minimal fossil fuel consumption.	<a href="#">Mitigated Negative Declaration</a>

Project Name	Project Number	UN SDGs <sup>2</sup>	Project and Environmental Impact Description	California Environmental Quality Act
San Joaquin Pipeline System	CUW37301	 	Improve delivery reliability and provide operational flexibility during maintenance activities or unplanned outages resulting from seismic or extreme weather, impacting 2.7 million customers. Water transmission is largely gravity fed requiring minimal fossil fuel consumption.	<a href="#">Final Environmental Impact Report</a>
University Mound Reservoir - Upgrade (North Basin)	CUW37201	  	Upgrade supply and delivery reliability to a San Francisco reservoir supplying about 25 of San Francisco's tap water.	<a href="#">Categorical Exemption</a>
Crystal Springs/San Andreas Transmission Upgrade	CUW37101	 	Improve water supply reliability between two reservoirs holding 28.7 billion gallons of water on the San Francisco Peninsula.	<a href="#">Final Environmental Impact Report</a>
Bay Division Pipeline Reliability-Pipeline	CUW36802	 	Upgrade seismic and delivery reliability to the pipelines delivering San Francisco Peninsula's main source of water, impacting 2.7 million customers. Water transmission is largely gravity fed requiring minimal fossil fuel consumption.	<a href="#">Final Environmental Impact Report</a>
Bay Division Pipeline Reliability Upgrade -Bay Tunnel	CUW36801	   	Upgrade seismic and delivery reliability to the tunnel connected to San Francisco Peninsula's main source of water, impacting 2.7 million customers, while avoiding negative impact on biodiversity, Water transmission is largely gravity fed requiring minimal fossil fuel consumption.	<a href="#">Final Environmental Impact Report</a>
Peninsula Pipeline Seismic Upgrade	CUW36702	 	Ensure seismic and supply reliability of pipelines on the San Francisco Peninsula, including preparedness for pipeline ruptures from landslides. Water transmission is largely gravity fed requiring minimal fossil fuel consumption.	<a href="#">Final Environmental Impact Report</a>
Harry Tracy Water Treatment Plant Long Term Improvements	CUW36701	  	Improve seismic and delivery reliability for the water treatment plant for San Francisco Peninsula's sole source of emergency water.	<a href="#">Final Environmental Impact Report</a>

Project Name	Project Number	UN SDGs <sup>2</sup>	Project and Environmental Impact Description	California Environmental Quality Act
Security Systems Upgrades	CUW36302	 	Establish necessary security features to protect important water service delivery systems.	<a href="#">Program Environmental Impact Report</a>
Installation of Supervisory Control and Data Acquisition (SCADA) System Phase 2	CUW36301	 	Establish a common software platform to monitor flow and pressure in key locations in San Francisco.	<a href="#">Categorical Exemption</a>
Existing Dechlorination Modifications - Pulgas Phase 5	CUW36105	  	Ensure safe drinking water for Peninsula residents.	<a href="#">Program Environmental Impact Report</a>
Structural Rehab (Roof) - Pulgas Phase 3	CUW36103	 	Protect water quality and delivery reliability for Peninsula residents.	<a href="#">Mitigated Negative Declaration</a>
Alameda Siphon #4	CUW35902	 	Provide redundancy to ensure continued water service to 2.7 million customers in case of major weather or seismic event.	<a href="#">Mitigated Negative Declaration</a>
New Irvington Tunnel	CUW35901	 	Guarantee water service to 2.7 million customers in four Bay Area counties within 24 hours of a major weather or seismic event. Water transmission is largely gravity fed requiring minimal fossil fuel consumption.	<a href="#">Final Environmental Impact Report</a>
Adit Leak Repairs	CUW35701	 	Upgrade supply and delivery reliability for water reservoir serving the Peninsula region.	<a href="#">Program Environmental Impact Report</a>
New Crystal Springs Bypass	CUW35601	 	Guarantee water service to more than 1 million people in San Mateo and San Francisco counties within 36 hours of a major weather or seismic event.	<a href="#">Final Environmental Impact Report</a>

Project Name	Project Number	UN SDGs <sup>2</sup>	Project and Environmental Impact Description	California Environmental Quality Act
Lower Crystal Springs Dam Improvements	CUW35401	     	Guarantee water service to more than 1 million people in San Mateo and San Francisco counties within 36 hours of a major weather or seismic event.	<a href="#">Final Environmental Impact Report</a>
Bay Division Pipeline No 3&4 Cross Connection	CUW35301	 	Seismic and supply reliability improvements to ensure delivery of water impacting 2.7 million customers. Water transmission is largely gravity fed requiring minimal fossil fuel consumption.	<a href="#">Mitigated Negative Declaration</a>
Alameda Creek Recapture Project	CUW35201	   	Recapture an estimated annual average of 7,178-acre feet of water to maintain water supply while protecting native fish populations.	<a href="#">Draft Environmental Impact Report</a>
Regional Groundwater Storage and Recovery	CUW30103	   	Store 7.5 years of drinking water supply to use in drought years impacting 2.7 million customers.	<a href="#">Final Environmental Impact Report</a>
Bay Division Pipeline Upgrade	CUW36802	 	Enhance delivery reliability of pipeline that delivers water to ratepayers on San Francisco Peninsula, impacting 2.7 million customers. Water transmission is largely gravity fed requiring minimal fossil fuel consumption.	<a href="#">Program Environmental Impact Report</a>
Forest Hill Pump Station Upgrade	CUW32001	 	Modernize existing mechanical and electrical systems with seismic upgrades to reliably deliver drinking water to San Francisco customers, impacting a service population of 805,000.	<a href="#">Categorical Exemption</a>
Harding Park Recycled Water Project	CUW30204	   	Construct infrastructure to produce and deliver recycled water to irrigate 163 acres of public golf course greens.	<a href="#">Final Environmental Impact Report</a>

Project Name	Project Number	UN SDGs <sup>2</sup>	Project and Environmental Impact Description	California Environmental Quality Act
Lake Merced Pump Station Upgrade	CUW30901	 	Modernize mechanical and electrical systems with seismic upgrades to reliably deliver drinking water to over 60 of San Francisco ratepayers.	<a href="#">Categorical Exemption</a>
Lake Merced Water Level Restoration	CUW30101	  	Maintain lake levels for San Francisco's emergency source of water.	<a href="#">Program Environmental Impact Report</a>
Le Grande Pump Station Upgrade	CUW33801	 	Modernize existing mechanical and electrical systems with seismic upgrades to reliably deliver drinking water.	<a href="#">Categorical Exemption</a>
Westside Enhanced Water Recycling Project	CUW30201	   	Conserve water supplies by transitioning to recycled water for non-drinking purposes.	<a href="#">Final Environmental Impact Report</a>
Recycled Water Project - Eastside	CUW30205	   	Serve about 2 million gallons per day of high-quality recycled water for non-potable uses such as irrigation and toilet flushing.	<a href="#">Program Environmental Impact Report</a>
San Francisco Groundwater Supply	CUW30102	   	Add groundwater to San Francisco's water supply to support reliability in the event of droughts and emergencies, impacting a service population of 805,000.	<a href="#">Final Environmental Impact Report</a>
Seismic Upgrade of Bay Division Pipeline at Hayward Fault	CUW35302	 	Improve seismic and supply delivery reliability for the pipeline responsible for delivering water to the San Francisco Peninsula, impacting 2.7 million customers. Water transmission is largely gravity fed requiring minimal fossil fuel consumption.	<a href="#">Final Environmental Impact Report</a>
Sutro Reservoir - Rehab/Seismic Upgrade	CUW33701	  	Structural upgrades to ensure the water supply and reliability for San Francisco, impacting a service population of 805,000.	<a href="#">Categorical Exemption</a>
Bay Division Pipeline No 3&4 Cross Connection	CUW38001	 	Seismic and supply reliability improvements to ensure delivery of water impacting 2.7 million customers. Water transmission is largely gravity fed requiring minimal fossil fuel consumption.	<a href="#">Mitigated Negative Declaration</a>

## Case Study: Watershed and Environmental Improvement Program

The SFPUC initiated the Watershed and Environmental Improvement Program (WEIP) in Fiscal Year 2006, a \$50 million commitment over ten years to protect and restore lands and natural resources within the Alameda Creek, San Mateo Creek, Pilarcitos Creek, and Tuolumne River watersheds, and other SFPUC lands and rights-of-way, that affect or are affected by operations of the SFPUC regional water system. The WEIP was developed in parallel to the Water System Improvement Program (WSIP), which included \$20 million of WSIP Green Bond funds dedicated to WEIP investments and \$30 million from the operating and Water capital program budgets, approximately \$3 million annually. This \$50 million investment over a ten-year period was intended to support implementation of the Water Enterprise Environmental Stewardship Policy by funding projects above the existing level of effort in watershed management at that time. This investment was also in addition to any new environmental mitigation requirements. The WEIP is now in its 18<sup>th</sup> year of implementation, with over \$54 million invested.

The highest priority for the \$20 million WSIP Green Bond funds was to permanently protect these watershed lands through fee title purchase of property from willing landowners. Only about 40% of the land in the Alameda Creek watershed above SFPUC reservoirs is protected by public ownership.

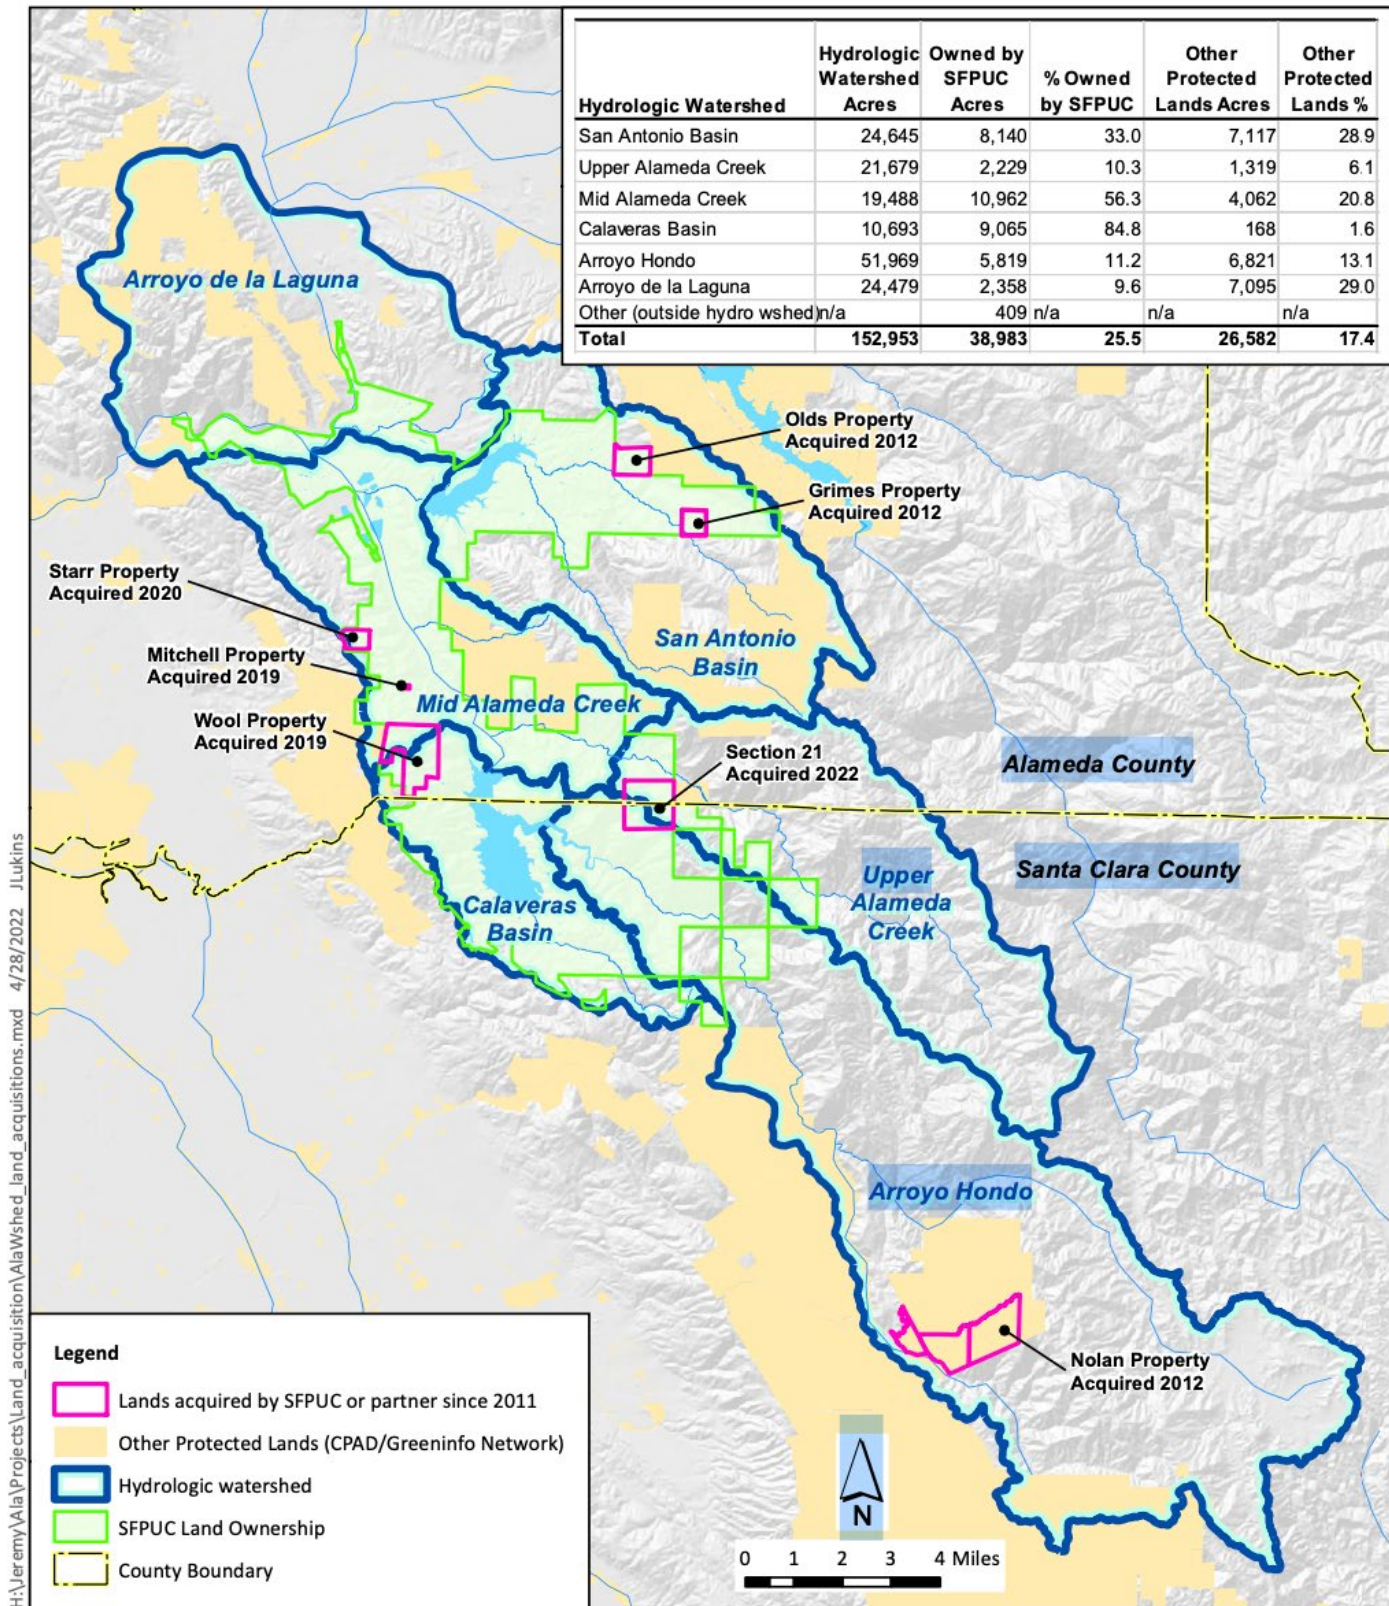

The SFPUC identified high priority and critical watershed lands that would be important to protect to support ecosystem health, ensure high water quality and provide a reliable water supply. The SFPUC worked with willing landowners and partner organizations to purchase a total of 3,183.82 acres in the Alameda Creek watershed. The SFPUC continues to identify land acquisition opportunities in the watershed, please see below for table of land acquisitions and map to date.

### Property Acquisitions in the Upper Alameda Creek Watershed

Property Name	Total Acreage	Cost	Year Acquired
Grimes Property	160	\$800,000	2010
Olds Property	259.32	\$1,300,000	2012
Nolan Ranch*	1,155	2,600,000	2012
Wool Ranch	787	\$9,650,000	2019
Mitchell Property	5	\$1,200,000	2019
Starr	164.5	\$1,282,500	2020
Section 21	653	\$3,167,500	2021
<b>Total</b>	<b>3,183.82</b>	<b>\$20,000,000</b>	

\* SFPUC contributed to the purchase but does not own fee title.

## Appendix A: State, City and SFPUC Legal, Regulatory, Policies and Programs

*The links provided in this Appendix are provided for convenience only and the information available on such pages is not incorporated by reference into this report.*

### **State of California**

The State of California has enacted legislation, regulations and executive orders that put the State oncourse to achieve significant greenhouse gas reductions while also addressing the impacts of climate change. Described below are selected policies and programs related to the SFPUC's capital planning:

- Assembly Bill 32 (Nunez, 2006) and Senate Bill 32 (Pavley, 2016)
  - Landmark legislation requiring California to reduce its overall greenhouse gas emissions to 1990 levels by 2020 and 40% below 1990 levels by 2030, and appointing the California Air Resources Board to develop policies to achieve this goal.
- Assembly Bill 1482 (Gordon, 2015), Senate Bill 246 (Wiechowski, 2015), Senate Bill 379 (Jackson, 2015), Assembly Bill 2800 (Quirk, 2016), Senate Bill 1035 (Jackson, 2018); Senate Bill 30 (Lara, 2018)
  - State laws calling for preparation of state climate adaptation strategy, establishing the Office of Planning and Research's Integrated Climate Adaptation and Resiliency Program, requiring local governments to include adaptation and resiliency strategies in general plans, requiring state agencies to account for climate change when planning new infrastructure, and establishing a risk transfer/insurance working group.
- Climate Change Scoping Plan
  - California's comprehensive plan outlining the state's approach to achieving its greenhouse gas emission reduction targets, including SB 32's goal of reducing emissions 40% below 1990 levels by 2030

In August 2018, then-California State Treasurer John Chiang signed the [Green Bond Pledge](#), making California the first state to pledge to use 'green' financing to combat climate change.

### **City and County of San Francisco**

San Francisco has long been a leader in the fight against climate change. Between 1990 and 2019, San Francisco's carbon footprint was reduced by 41% while population increased 22% and the GDP increased 199%.

The San Francisco Climate Action Plan was first released in 2004 and San Francisco has been leading the way on local climate action and environmental justice, and launching innovative community programs and outreach campaigns for residents and businesses. Since then, the [Climate Action Plan](#) has been updated to put racial equity, environmental justice, resilience, public health, economic recovery, and a just transition to a fossil fuel-free jobs at the core of its climate action solutions. The [2021 San Francisco Climate Action Plan](#) (Plan) is the result of a multi-year process developed by the San Francisco Department of the Environment with support and collaboration from many individuals and institutions, including the SFPUC. The Plan charts a pathway to achieve net-zero greenhouse gas emissions and works toward addressing racial and social equity, public health, economic recovery, resilience and providing safe and affordable

housing to all. The Plan aligns to the goals set forth in San Francisco's Climate Action Framework, as shown below:

San Francisco's leadership further strengthened the City's commitment to climate action in 2019 when the Board of Supervisors unanimously approved the Climate Emergency Resolution 160-19, aligning San Francisco's climate goals with the Paris Agreement by limiting global warming to 1.5 °C above pre-industrial levels.

In 2023, the San Francisco Department of the Environment collaborated with the SFPUC to issue a [Water Supply Addendum](#) to the Climate Action Plan to introduce a new Water Supply chapter that focuses on how San Francisco plans to address and secure water supplies that are being impacted by multiple challenges, including climate change. Specifically, the new chapter encompasses three key strategies and 15 supporting actions for water resilience against the threat of a warming climate.

- Invest and implement demand management programs.
  - Continue to implement current conservation measure noted in the SFPUC's [2020 Retail Water Conservation Plan](#), and on our website at [www.sfpuc.org/savewater](http://www.sfpuc.org/savewater).
  - Continue to implement current conservation measures and upcoming new measures noted in the SFPUC's 2020 Retail Water Conservation Plan.
  - Prepare updated 2025 Retail Water Conservation Plan and implement current conservation assistance measures noted in the plan.
  - Continue to implement conservation assistance measures outlined in 2025 and future-year Water Conservation Plans.
- Invest and implement innovative programs to reduce water use and develop new water supplies.
  - Continue to implement the pilot atmospheric water generation project to test the viability of the technology to produce water for irrigation in a community garden setting.
  - Continue to encourage breweries to reuse process water onsite via SFPUC's Onsite Water Reuse Grant Program.
  - Continue to encourage the integration of heat recovery in onsite water reuse systems. Explore opportunities for other pilot atmospheric water generation projects.
  - Continue to implement the Innovations Program.
  - Implement demonstration facilities for purified water.
- Invest and implement supply augmentation programs.
  - Continue to implement the San Francisco Groundwater Supply Project, which allows the SFPUC to supplement drinking water sources by blending a small amount of groundwater with water from the San Francisco Regional Water System.
  - Continue to implement San Francisco's Onsite Water Reuse Program, which requires new development projects of 100,000 gross square feet or more to install and operate an onsite water reuse system.
  - Continue planning, evaluation of technical viability, energy efficiency, and future climate scenarios.
  - Implement demonstration facilities for purified water.
  - Design and construction of alternative water supply projects.
  - Continue to operate and monitor groundwater projects for maximum benefit and sustainability.

The San Francisco Environment Department is updating the City's Climate Action Plan. The updated 2025 Plan will focus on actions through 2030, with clear metrics and reporting to track progress towards goals. The 2025 Plan will include broad strategies that City departments are using to reduce emissions, and certain actions within each strategy.

The San Francisco Mayor and Board of Supervisors have also led the initiatives described below that require the SFPUC to consider climate change and social inclusion in its capital planning:

- [Local Hire Ordinance](#) was adopted in December 2010 by the San Francisco Board of Supervisors. The ordinance requires that local residents perform a minimum 30 of trade hours and 50% for apprenticeship hours and promotes the employment of local residents on locally sponsored projects.
- [Guidance for Incorporating Sea Level Rise into Capital Planning](#) also takes place as part of the City's Capital Planning Review process. City projects undergo a sea-level vulnerability assessment and must respond to anticipated consequences through redesign or relocation. The SFPUC actively participated in the Mayor's Sea Level Rise Coordinating Committee and Working Group to develop the Sea Level Rise Guidance. The objective is to work with other City agencies towards a more holistic, integrated

and coordinated response to climate change.

## ***San Francisco Public Utilities Commission***

### ***Overview***

The SFPUC is a department of the City and County of San Francisco responsible for the maintenance, operation and development of three utility enterprises:

- **The Water Enterprise** serves more than 2.7 million people and is responsible for managing the transmission, treatment, storage, and distribution of potable water to San Francisco and 27 wholesale customer entities in San Mateo, Santa Clara and Alameda Counties.
- **The Wastewater Enterprise** operates and maintains a combined sewer system and provides wastewater and stormwater collection, treatment and disposal services to customers in San Francisco and three municipal sewer service providers in northern San Mateo County.
- **The Power Enterprise** provides hydroelectric, solar and other power to municipal customers in San Francisco and other public agencies and retail customers. The Power Enterprise also operates CleanPowerSF, a Community Choice Aggregation program that gives electricity consumers in San Francisco a choice of having their electricity supplied from clean renewable sources, such as solar, wind, and geothermal, at competitive rates.

Headquartered in San Francisco, the SFPUC has approximately 2,300 employees and a combined annual operating and capital budget of over \$3.5 billion.

### ***Financial Policies***

The San Francisco City Charter requires the SFPUC to exercise prudent financial stewardship of SFPUC assets by establishing "rates, fees and charges at levels sufficient to improve or maintain financial condition and bond ratings at or above levels equivalent to highly rated utilities of each enterprise under its jurisdiction, meet requirements and covenants under all bond resolutions and indentures, and provide sufficient resources for the continued financial health (including appropriate reserves), operation, maintenance and repair of each enterprise, consistent with good utility practice."

To serve the financial objectives and parameters established by the Commission, the SFPUC has established a [10-Year Financial Plan](#) as well as [Debt Management Policies and Procedures](#) for debt financing associated with the Water, Wastewater and Power Enterprises. In addition, the SFPUC maintains a [Fund Balance Reserve Policy](#), a [Debt Service Coverage Policy](#), and a [Capital Financing Policy](#). Last, the [Debt Policy of The City and County of San Francisco](#), established by the Controller's Office of Public Finance, summarizes the City's existing debt policies and formally establishes them for all future debt.<sup>5</sup>

---

<sup>5</sup> For information about SFPUC's Investor Relations and Financial Reports, see: <https://sfpuc.org/about-us/reports/debt-management-and-disclosure-reports>

## ***Environmental, Social, and Governance Policies and Programs***

With the useful life of capital assets typically extending 30 years or more, climate mitigation and adaptation criteria are included in the SFPUC's capital planning and project selection process. Described below are SFPUC-level policies and programs that contribute to capital planning decisions informed by climate adaptation and/or mitigation and social inclusion.

The activities below have been organized into three categories: environmental, social, and governance (ESG):

### Environmental

- [CleanPowerSF](#): The SFPUC began serving customers through CleanPowerSF, a Community Choice Aggregation program, in 2016. CleanPowerSF gives residential and commercial electricity consumers in San Francisco a choice of having their electricity supplied from clean renewable sources, such as solar, wind, and geothermal, at competitive rates. CleanPowerSF is currently the largest supplier of electricity in San Francisco, serving over 380,000 accounts, approximately 58% of the total load within San Francisco. CleanPowerSF and Hetch Hetchy Power together serve approximately 75% of the load in San Francisco. In 2023, CleanPowerSF met a historic milestone of delivering 100% renewable electricity to all of its 380,000 residential and business customers two years ahead of the City's 2025 target.
- [GoSolarSF](#): GoSolarSF is operated by the SFPUC Power Enterprise and provides rebates to help CleanPowerSF and Hetch Hetchy residential and business electric customers install solar panel systems. Together, these systems produce 23.5 megawatts of renewable solar electric power. Today, GoSolarSF continues to serve low-income customers through the [Disadvantaged Communities – Single-family Solar Homes \(DAC-SASH\) program](#).
- [Water Enterprise Stewardship Policy](#): The purpose of the Water Enterprise Environmental Stewardship Policy is to establish a long-term management policy for natural resources associated with the operation of the water system within the Tuolumne River, Alameda Creek, and Peninsula watersheds.
- [Green Infrastructure](#): Green infrastructure projects divert stormwater from the sewer system while beautifying San Francisco's neighborhoods, providing ecological function and urban habitat, and contributing to bike and pedestrian friendly design. Green infrastructure technologies include rain gardens, permeable pavement, and rainwater harvesting systems. The SFPUC has completed 272 green infrastructure projects which collectively contribute to diverting an estimated 63 million gallons of stormwater from the sewer system annually.
- [OneWaterSF](#): The objective of OneWaterSF is to optimize the use of finite water and energy resources with community and ecosystem needs, creating a more resilient and reliable future for the SFPUC.

### Social

- [Community Benefits](#): The SFPUC's Community Benefits Program focuses on Workforce Development, Education, Art, Environmental Justice/Land Use, Neighborhood Partnerships, and Small Business Opportunities. The SFPUC was the first utility in the nation to adopt a [Community Benefits Policy](#) and an [Environmental Justice Policy](#) with the goal of proactively providing diverse communities with opportunities in workforce and economic development, the arts, urban agriculture and education.

- [Environmental Justice Policy](#): The SFPUC aims to prevent, mitigate, and lessen disproportionate environmental impacts of its activities on communities in all SFPUC service areas and to ensure that public benefits are shared across all communities. The SFPUC defines environmental justice as the fair treatment of people of all races, cultures, and incomes and believes that no group of people should bear a disproportionate share of negative environmental consequences resulting from the operations, programs, and/or policies of the SFPUC.
- [Social Impact Partnership Program](#): The SFPUC is the first public utility in the country to implement a social impact program that advances corporate social responsibility as a part of its competitive bidding process. For certain SFPUC contracts, firms responding to Request for Proposals (RFP) may voluntarily pledge Social Impact Partnership commitments to local impacted communities. If selected for the given contract, the firm will be responsible for delivering the Social Impact Partnership commitments that they proposed in their response to the RFP. To date, these commitments have supported scholarships for college students, mentorship for middle-school students, internships for youth and young adults, childcare for working parents, mentorship for small businesses, urban greening, and access to healthy food.

### Governance

- [SFPUC Commission](#): The SFPUC Commission consists of five members, nominated by the Mayor and approved by the Board of Supervisors. Their responsibility is to provide operational oversight in areas such as rates and charges for services, approval of contracts, and organizational policy. One seat on the Commission is reserved for a member with experience in environmental justice policy and an understanding of environmental justice issues.
- [Boards, Commissions, and Committees](#): The SFPUC is proud to collaborate with various groups of community members to serve ratepayer needs in a way that is efficient, fair, affordable, and in harmony with the environment. These bodies include:
  - [Citizens' Advisory Committee](#)
  - [Rate Fairness Board](#)
  - [Southeast Community Facility Commission](#)
  - [Small Firm Advisory Committee](#)
  - [Residential Users Appeal Board](#)
- [2020 Strategic Plan](#): In August 2016, the SFPUC Strategic Planning Steering Committee identified Environmental Stewardship as one of six goals to guide its work through the year 2020. Within Environmental Stewardship, the 2020 Strategic Plan specifies the goal to sustainably manage the resources entrusted to its care to ensure environmental and community health. This includes the following objectives:
  - Sustainably manage natural resources and physical systems to protect impacted people, water, land, and ecosystems.
  - Develop, coordinate, and communicate a comprehensive and consistent approach to mitigate and adapt to climate change.
  - Be resource efficient in all business operations.
  - Investigate the feasibility of implementing an environmental management system.

### ***United Nations Sustainable Development Goals***

Impacts from SFPUC projects financed by Green Bonds are also aligned with several United Nations Sustainable Development Goals (SDGs). To determine project impact, the SFPUC relies on the International Capital Market Association (ICMA) "Green, Social and Sustainability Bonds: A High-Level Mapping to the Sustainable Development Goals" (June 2020).

## Appendix B: SFPUC Green Bonds Program

*The links provided in this Appendix are provided for convenience only and the information available on such pages is not incorporated by reference into this report.*

Since issuing its first series of green bonds in Fiscal Year 2015, the SFPUC has issued more than \$4.3 billion in certified green bonds to finance Water and Wastewater capital projects and \$100 million in self-designated green bonds to finance Power capital projects that advance climate change mitigation or adaptation, making the SFPUC one of the largest municipal issuers of green bonds in the United States<sup>6</sup>. In 2017, the SFPUC was recognized by the Climate Bonds Initiative for being the first issuer worldwide to sell bonds under CBI's water criteria. In 2018, the SFPUC became among the first signatories of the State's Green Bond Pledge. In 2019, the combined green bond programs of the City and County of San Francisco and the SFPUC were recognized as a global leader in the C40 report [Cities100](#). Finally, the SFPUC was awarded the 2021 US Municipal Green Bond of the Year by *Environmental Finance*.

The SFPUC adheres to the International Capital Market Association's Green Bond Principles that consist of four core components:

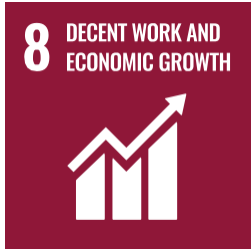

- Use of Proceeds: The SFPUC issues Green Bonds to finance projects with clear environmental benefits. Project categories include sustainable water and wastewater management, climate change adaptation and renewable energy.
- Process for Project Evaluation and Selection: San Francisco's numerous policies and programs described herein aim to ensure sustainable capital planning and project selection. Further, the SFPUC engages third-party verifiers to verify that select projects for the Water Enterprise's Water System Improvement Program (WSIP) and the Wastewater Enterprise's Sewer System Improvement Program (SSIP) meet the required criteria. As part of the certification process, the SFPUC engaged Sustainalytics to provide third-party verification that the bonds are aligned with the Climate Bonds Initiative.
- Management of Proceeds: The SFPUC records Green Bond proceeds in separate capital project funds available only to eligible projects. Non-eligible projects cannot access Green Bond proceeds.
- Reporting: The SFPUC publishes annually Green Bond Reports for the Water, Wastewater, and Power Enterprises that include project spending and management of proceeds reports for each green bond issued throughout project construction. Beginning with the Fiscal Year 2018-19 Green Bond Reports, in addition to project spending, the reports also include project impacts as well as additional information in connection with the climate and sustainability activities of the SFPUC.

## Appendix C: SFPUC Climate and Social Inclusion Impacts Aligned to the United Nations Sustainable Development Goals (UN SDGs)

The links provided in this Appendix are provided for convenience only and the information available on such pages is not incorporated by reference into this report.

United Nations Sustainable Development Goal	SFPUC Program Impact
 <p><b>4 QUALITY EDUCATION</b></p>	<p><u><a href="#">Education</a></u>: The SFPUC is committed to preparing the next generation of environmental stewards and continuing to engage with existing generations to prevent pollution and sustain our natural resources. The SFPUC believes that everyone has a role to play in maintaining the environment and is proud to empower its service area communities with the resources needed to do it.</p>
 <p><b>5 GENDER EQUALITY</b></p>	<p><u><a href="#">Small Business Opportunities</a></u>: The SFPUC is dedicated to increasing the number of women working in the construction trades. The SFPUC partners with the National Association of Women in Construction and the Women's Business National Council to host the Annual Women in Construction Exposition. The SFPUC is also proud to be a member of the Tuolumne Community Collaborative, a group of more than 25 entities including education institutions, local contractors, professional services firms, and government agencies that support a pipeline of local workers in the construction industry. The Collaborative features a Pre-Apprenticeship Construction Training Program, and it recently celebrated an inaugural all-female class. Through the program, participants study construction industry best practices, experience hands-on training, learn construction safety, and receive project-specific worker certifications.</p>
 <p><b>6 CLEAN WATER AND SANITATION</b></p>	<p><u><a href="#">The Water System Improvement Program</a></u>: The Water System Improvement Program (WSIP) is a \$4.8 billion, multi-year capital program to upgrade the SFPUC's regional and local water systems. The program delivers capital improvements that enhance the SFPUC's ability to provide reliable, affordable, high quality drinking water in an environmentally sustainable manner to 2.7 million people in the greater Bay Area. The program consists of 87 projects - 35 local projects located within San Francisco and 52 regional projects, spread over seven counties from the Sierra foothills to San Francisco. The San Francisco portion is 100% complete as of June 2020. The Regional portion is approximately 99% complete. The forecasted completion date for overall program completion is June 2032.</p>
 <p><b>14 LIFE BELOW WATER</b></p>	
	<p><u><a href="#">The Sewer System Improvement Program</a></u>: The Sewer System Improvement Program (SSIP) is a citywide investment to upgrade San Francisco's aging sewer infrastructure to ensure a reliable, sustainable, and seismically safe sewer system now and for generations to come.</p>

United Nations Sustainable Development Goals	SFPUC Program Impact
 <p><b>7</b> AFFORDABLE AND CLEAN ENERGY</p>	<p><a href="#"><u>Power:</u></a> For 100 years, the SFPUC has been generating greenhouse gas-free hydropower as San Francisco’s full-service, publicly owned electric utility. This clean Hetch Hetchy Power energizes San Francisco’s schools, MUNI, streetlights, City Hall, SFO Airport, the Zoo, and other civic institutions and private facilities. In 2016, the SFPUC began serving customers through CleanPowerSF, a community choice aggregation program, giving consumers the option to have their electricity supplied from clean renewable sources like wind and solar to the electric grid. Today, CleanPowerSF powers more than 380,000 San Francisco residents and businesses.</p>
 <p><b>8</b> DECENT WORK AND ECONOMIC GROWTH</p>	<p><a href="#"><u>Workforce Development:</u></a> As one of the City's largest employers, the SFPUC is fostering a skilled and diverse local workforce that manages water, power and sewer operations and is connected to the local community. SFPUC's workforce development programs connect local youth and adults with learning, apprenticeship, job training, employment, and business opportunities. These programs support a strong, inclusive, local economy and a skilled, diverse, local workforce for today and tomorrow.</p> <p><a href="#"><u>Social Impact Partnership Program:</u></a> The SFPUC views its capital projects as investments — in the future of its facilities, services, and its communities. As the SFPUC upgrades its systems and operations, private sector partners join the SFPUC in being a good neighbor to the communities affected by the operation and improvement of water, wastewater, and power services. By including community benefits criteria in SFPUC’s Requests for Proposals (RFP) with anticipated contracts of \$5 million or more, SFPUC provides its contracting community with an opportunity to earn extra points during the bidding process for their demonstrated commitment to community benefits and environmental justice. Social Impact Partners— professional services and construction firms in fields such as engineering, architecture, resource management and technology— provide resources and opportunities in the communities where SFPUC operates and provides services. These commitments include direct financial contributions, volunteer, and in-kind donations to local schools and nonprofits.</p>
 <p><b>9</b> INDUSTRY, INNOVATION AND INFRASTRUCTURE</p>	<p><a href="#"><u>The Water System Improvement Program:</u></a> The Water System Improvement Program (WSIP) is a \$4.8 billion, multi-year capital program to upgrade the SFPUC’s regional and local water systems. The program delivers capital improvements that enhance the SFPUC’s ability to provide reliable, affordable, high quality drinking water in an environmentally sustainable manner to 2.7 million people in the greater Bay Area. The program consists of 87 projects - 35 local projects located within San Francisco and 52 regional projects, spread over seven counties from the Sierra foothills to San Francisco.  <p>10 REDUCED INEQUALITIES</p>	<p><u><a href="#">Environmental Justice and Land Use</a></u>: The SFPUC works hard every day to provide fundamental environmental benefits through water, power and sewer services. The SFPUC recognizes there are challenges to providing these services as some parts of our community face a greater burden than others due to the location of facilities in their neighborhoods. SFPUC works with these communities to understand their needs and lessen the effects caused by operations. The SFPUC is proud to be the first public utility in the nation to develop an Environmental Justice Policy which guides efforts to support environmentally healthy and safe communities where we live, work, learn and play. As part of its mission, the SFPUC also maintains and preserves more than 590,000 acres of land to protect our natural resources and critical infrastructure. The SFPUC often has the opportunity to use land for more than one purpose and when possible, the SFPUC partners with local leaders to support innovative uses which benefit the environment and enhance the quality of life for the SFPUC's service area residents.</p> <p><u><a href="#">Grants</a></u>: From Tuolumne County, to San Francisco, to the Peninsula, the SFPUC is especially committed to providing opportunities in the neighborhoods most impacted by its water, power and sewer operations. As SFPUC upgrades its facilities and completes capital projects, it ensures these efforts support public health, jobs, learning and education opportunities in these communities. SFPUC is proud of leveraging the work done every day to create spaces and programs that help to make these neighborhoods a better place to live, work and play.</p>
 <p>11 SUSTAINABLE CITIES AND COMMUNITIES</p>  <p>12 RESPONSIBLE CONSUMPTION AND PRODUCTION</p>  <p>13 CLIMATE ACTION</p>  <p>15 LIFE ON LAND</p>	<p><u><a href="#">Power</a></u>: For 100 years, the San Francisco Public Utilities Commission (SFPUC) has been generating greenhouse gas-free hydropower as San Francisco's full-service, publicly owned electric utility. This clean Hetch Hetchy Power energizes San Francisco schools, MUNI, streetlights, City Hall, SFO Airport, the Zoo, and other civic institutions and private facilities. In 2016, the City launched CleanPowerSF, a community choice aggregation program, to introduce even more renewable energy from sources like wind and solar to the electric grid. Today, CleanPowerSF powers more than 380,000 San Francisco residents and businesses.</p> <p><u><a href="#">The Water System Improvement Program</a></u>: The Water System Improvement Program (WSIP) is a \$4.8 billion, multi-year capital program to upgrade the SFPUC's regional and local water systems.
