

CONCRETE STREET RECONSTRUCTION

Coso Avenue from Precita Avenue to Coleridge Street

When: Replacement of 9 concrete panels is anticipated to begin the week of **December 1-5, 2025**. Weather and construction issues could impact the schedule. General workdays and hours (weather permitting) are Monday – Friday, 7:00 a.m. to 5:00 p.m.

Where: Work will occur on Coso Avenue between Precita Avenue and Coleridge Street. There are no driveways or garages on the portion of Coso Avenue where the concrete panels will be replaced.

Why: As part of the restoration after the replacement of water pipelines, concrete streets that were excavated will now be reconstructed. This work requires us to remove and replace the 9 concrete panels that have been disrupted by our water main installation trench.

What to expect during construction: Industry standards require the newly poured concrete panels be closed to traffic while they cure (dry) to ensure the concrete achieves its maximum compressive strength. The total curing time is expected to take up to 7 days before the panels can be opened to regular roadway traffic. There may be noise, vibration, dust, parking and traffic impacts in the work zone and disruption to normal neighborhood activity.

Crews will excavate and remove the 9 existing concrete street panels and grade the site. They will then plate over the panel areas to allow access on the street.

Wooden forms will be placed and the concrete panels will be poured. **Once the concrete is poured, vehicles cannot drive over the panels until inspectors approve the panels for street access – expected to last up to 7 days after the pour.** This is to allow the concrete to cure.

No street parking will be allowed in the work zone and in areas where concrete needs to cure.
