

Re: SFPUC Stormwater Design Guidelines Amendment #1:
*Updates to applicability criteria in the San Francisco
Stormwater Design Guidelines*

July 31, 2012

In June of 2012, the General Manager approved Amendments No. 1 for the *Stormwater Design Guidelines (Guidelines)*. In order to improve and enhance the fairness and effectiveness of the SFPUC's stormwater management programs the applicability criteria of the *Guidelines* has been amended as outlined below. This change is effective immediately and will be reflected in the next revision of the *Guidelines*.

The applicability criteria of the *Guidelines* located on page 11 of the *Guidelines* is effectively revised as follows:

“The effective date of these *Guidelines* is January 12, 2010. All projects disturbing 5,000 square feet or more of the ground surface or surface over water must comply with these *Guidelines* if they filed for a site permit application or building permit application on or after January 12, 2010. Projects that filed a site permit application or building permit application with the Department of Building Inspection or the Port Building Department prior to January 12, 2010 are not subject to the requirements of the *Guidelines*. Subsequent revisions or addenda for a project where the site permit application or building permit application was filed prior to January 12, 2010 do not trigger application of the *Guidelines*.”
